Stones and Stories

Bioarchaeology covers the history and general theory of the field plus the recovery and laboratory treatment of human remains. Bioarchaeology is the study of human remains in context from an archaeological and anthropological perspective. The book explores, through numerous case studies, how the ways a society deals with their dead can reveal a great deal about that society, including its religious, political, economic, and social organizations. It details recovery methods and how, once recovered, human remains can be analyzed to reveal details about the funerary system of the subject society and inform on a variety of other issues, such as health, demography, disease, workloads, mobility, sex and gender, and migration. Finally, the book highlights how bioarchaeological techniques can be used in contemporary forensic settings and in investigations of genocide and war crimes. In Bioarchaeology, theories, principles, and scientific techniques are laid out in a clear, understandable way, and students of archaeology at undergraduate and graduate levels will find this an excellent guide to the field.

Archaeology

Archaeological chemistry is a subject of great importance to the study and methodology of archaeology. This comprehensive text covers the subject with a full range of case studies, materials, and research methods. With twenty years of experience teaching the subject, the authors offer straightforward coverage of archaeological chemistry, a subject that can be intimidating for many archaeologists who do not already have a background in the hard sciences. With clear explanations and informative illustrations, the authors have created a highly approachable text, which will help readers overcome that intimidation. Topics covered included: Materials (rock, pottery, bone, charcoal, soils, metals, and others), Instruments (microscopes, NAA, spectrometers, mass spectrometers, GC/MS, XRF & XRD, Case Studies (Provenience, Sediments, Diet Reconstruction, Past Human Movement, Organic Residues). The detailed coverage and clear language will make this useful as an introduction to the study of archaeological chemistry, as well as a useful resource for years after that introduction.

Archaeology

Peter Drewett's comprehensive survey explores every stage of the dig process, from the core work of discovery and excavation to the final product: the published archaeological report. Main topics covered are: how an archaeological site is formed finding and recording archaeological sites planning excavations, digging the site and recording the results post-fieldwork planning, processing and finds

analysis interpreting the evidence publishing the report. Illustrated with 100 photographs and line drawings, and using numerous case studies, *Field Archaeology* is the essential introductory guide for archaeology students, and is certain to be welcomed by the growing number of enthusiasts for the subject.

Forgotten Africa

In the Beginning describes the basic methods and theoretical approaches of archaeology. This is a book about fundamental principles written in a clear, flowing style, with minimal use of technical jargon, which approaches archaeology from a global perspective. Starting with a broad-based introduction to the field, this book surveys the highlights of archaeology's colorful history, then covers the basics of preservation, dating the past, and the context of archaeological finds. Descriptions of field surveys, including the latest remote-sensing methods, excavation, and artifact analysis lead into the study of ancient environments, landscapes and settlement patterns, and the people of the past. Two chapters cover cultural resource management, public archaeology, and the important role of archaeology in contemporary society. There is also a chapter on archaeology as a potential career. *In the Beginning* takes the reader on an evenly balanced journey through today's archaeology. This well-illustrated account, with its numerous boxes and sidebars, is laced with interesting, and sometimes entertaining, examples of archaeological research from all parts of the world. This classic textbook of archaeological method and theory has been in print for nearly 50 years and is used in many countries around the world. It is aimed at introductory students in archaeology and anthropology taking survey courses on archaeology, as well as more advanced readers.

Strung Out on Archaeology

Archaeology is a jargon-free and accessible introduction to the field which details how archaeologists study the human past in all its fascinating diversity. Now in its twelfth edition, this classic textbook has been updated to reflect the latest research and new findings in the field. Reflecting the global scope of the discipline, the book has a truly international coverage of important discoveries and sites from many corners of the globe. Individual chapters examine archaeology and its history, considering the role of the archaeologist and how they discover, investigate and classify sites and artifacts. This journey through archaeology also includes a discussion of important individuals and groups, and some of the ways in which archaeologists attempt to explain major social and cultural changes in the remote past. *Archaeology* ends with an outline of the complex world of cultural resource management and gives invaluable advice on how to become an archaeologist. Richly illustrated throughout, this popular and engaging textbook on archaeological methods has introduced generations of students to the captivating world of archaeology.

Archaeology: An Introduction

Studies in Crime

Alfred Vincent Kidder's *Introduction to the Study of Southwestern Archaeology* was the first regional synthesis and summary of Pueblo archaeology. It is a guide to historic and prehistoric sites of the Southwest as well as a preliminary account of Kidder's exemplary excavation at Pecos.

Field Archaeology

An accessible and wide-ranging introduction to the exciting and expanding field of archaeological science, for students, professionals and academics.

An Introduction to the Archaeology of Ancient Egypt

This volume is a comprehensive, critical introduction to vertebrate zooarchaeology, the field that explores the history of human relations with animals from the Pliocene to the Industrial Revolution. The book is organized into five sections, each with an introduction, that leads the reader systematically through this swiftly expanding field. Section One presents a general introduction to zooarchaeology, key definitions, and an historical survey of the emergence of zooarchaeology in the Americas, Europe, Asia, and Africa, and introduces the conceptual approach taken in the book. This volume is designed to allow readers to integrate data from the book along with that acquired elsewhere within a coherent analytical framework. Most of its chapters take the form of critical “ review articles, ” providing a portal into both the classic and current literature and contextualizing these with original commentary. Summaries of findings are enhanced by profuse illustrations by the author and others.

An Introduction to the Study of Southwestern Archaeology

Illustrated thoroughly, *Biomolecular Archaeology* is the first book to clearly guide students through the study of ancient DNA: how to analyze biomolecular evidence (DNA, proteins, lipids and carbohydrates) to address important archaeological questions. The first book to address the scope and methods of this new cross-disciplinary area of research for archaeologists. Offers a completely up-to-date overview of the latest research in this innovative subject. Guides students who wish to become biomolecular archaeologists through the complexities of both the scientific methods and archaeological goals. Provides an essential component to undergraduate and graduate archaeological research.

The Archaeology Coursebook

Video games exemplify contemporary material objects, resources, and spaces that people use to define their culture. Video games also serve as archaeological sites in the traditional sense as a place, in which evidence of past activity is preserved and has been, or may be, investigated using the discipline of archaeology, and which represents a part of the archaeological record. This book serves as a general introduction to "archaeogaming"; it describes the intersection of archaeology and video games and applies archaeological method and theory into understanding game-spaces as both site and artifact.

Bioarchaeology

Archaeology

This comprehensive reference book addresses the questions and problems of cultural resource archaeology for graduate students and practicing archaeological field workers. Neumann and Sanford use their decades of field experience to discuss in great detail the complex processes involved in conducting a CRM project. Dealing with everything from law to logistics, archival research to zoological analysis, project proposals to report production, they provide an invaluable sourcebook for archaeologists who do contract work in the United States. After introducing the legal and ethical aspects of cultural resources management, the authors describe the processes of designing a proposal and contracting for work, doing background research, conducting assessment, testing, mitigation work (Phase I, II, and III), laboratory analysis, and preparing reports for project sponsors. The volume's emphasis on

practical problems, use of extensive examples, and detailed advice on a host of subjects make it an ideal training manual and reference tool for archaeologists and field schools.

An Introduction to Museum Archaeology

Teaching the basic principles of archaeology through an “ excavation ” and analysis of New Orleans Mardi Gras parades and the beads thrown there? A student ’ s dream book! Award-winning historical archaeologist Laurie Wilkie takes her two loves and merges them into a brief, lively introductory textbook that is sure to actively engage students. She shows how her analysis of trinkets tossed from parade floats can illustrate major themes taught in introductory archaeology classes—from methods to economy, social identity to political power—introduced in a concrete, entertaining way. The strength of Wilkie ’ s book is in showing how different theoretical models used by archaeologists lead to different research questions and different answers. The textbook covers all the major themes expected of brief introductory texts but is one that students will want to read.

An introduction to the archaeology of southern Idaho

Archaeogaming

The explorations of archaeology encompass the whole globe, survey 2.5 million years, and range from deserts to jungles, from deep caves to mountain tops, and from pebble tools to GPS. Its efforts to reconstruct and understand the past do not fail to fascinate us. Paul Bahn explores the importance of archaeology in this entertaining introduction.

Reading Archaeology

An Introduction to Museum Archaeology provides a comprehensive survey and synthesis of all aspects of current museum practice in relation to the discipline of archaeology. Divided into four separate but related parts it begins with a discussion of what is meant by museums, archaeology and museum archaeology and a brief survey of its history, legal foundation and global geographic spread. This is an essential text for anyone studying museums, archaeology or cultural heritage and a reference for those working in these fields.

Archaeology

This bestselling book has firmly established itself as the most accessible guide to archaeology available. It features: * an explanation to the discovery and excavation of sites * a helpful outline of the major dating methods * clear explanations of scientific techniques * new theories and current controversies * explanatory diagrams and photos * guidance on further reading and up-to-date bibliography.

Archaeological Theory

This provocative introduction examines the most important new school of archaeological thought and practice to have emerged over the last two decades and provides students with an assessment of the impact and importance of recent theoretical debates.

Introduction to Islamic Archaeology

"This fully updated and revised new edition of the bestselling *The Archaeology Coursebook* is a guide to students studying archaeology for the first time, providing pre-university students and teachers as well as undergraduates and enthusiasts with the skills and technical concepts necessary to grasp the subject."--BOOK JACKET.

The Archaeological Process

This student-friendly introduction to the archaeology of ancient Egypt guides readers from the Paleolithic to the Greco-Roman periods, and has now been updated to include recent discoveries and new illustrations.

- Superbly illustrated with photographs, maps, and site plans, with additional illustrations in this new edition
- Organized into 11 chapters, covering: the history of Egyptology and Egyptian archaeology; prehistoric and pharaonic chronology and the ancient Egyptian language; geography, resources, and environment; and seven chapters organized chronologically and devoted to specific archaeological sites and evidence
- Includes sections on salient topics such as the constructing the Great Pyramid at Giza and the process of mummification

Practical Archaeology

"Not many archaeology books are as useful and well written, with both faculty and student in mind." - Mark Lewine, Cuyahoga Community College

Archaeology and Heritage

This updated edition of Professor Ian Hodders original and classic work on the role which anthropology must play in the interpretation of the archaeological record. There has long been a need for archaeologists and anthropologists to correlate their ideas and methods for interpreting the material culture of past civilisations. Archaeological interpretation of the past is inevitably based on the ideas and experiences of the present and the use of such ethnographic analogy has been widely adapted and criticised, not least in Britain. In this challenging study, Ian Hodder questions the assumptions, values and methods which have been too readily accepted. At the same time, he shows how anthropology can be applied to archaeology. He examines the criteria for the proper use of analogy and, in particular, emphasises the need to consider the meaning and interpretation of material cultures within the total social and cultural contexts. He discusses anthropological models of refuse deposits, technology and production, subsistence, settlement, burial, trade exchange, art form and ritual; he then considers their application to comparable archaeological data. Throughout, Professor Hodder emphasises the need for a truly scientific approach and a critical self-awareness by archaeologists, who should be prepared to study their own social and cultural context, not least their own attitudes to the present-day material world.

Practicing Archaeology

This book offers an introduction to the archaeology of the Islamic world. It traces the history of the discipline from its earliest manifestations through to the present and evaluates the contribution made by archaeology to the understanding of key aspects of Islamic culture. The author argues that it is essential for the results of archaeological research to be more fully integrated into the wider historical study of the Islamic world. Organising the book into broad themes allows a focus on issues that are relevant across different regions and periods. Short case studies are included to allow the reader to examine the ways in which archaeologists collect and interpret material in specific contexts. The emphasis is on archaeological work conducted in the area stretching from Afghanistan and the Central Asian republics in the east to Spain in the west. Comparisons are also be drawn with Islamic regions of sub-Saharan

Africa and the Indian subcontinent, reflecting the main focus of archaeological work in the Islamic world to the present day.

An Introduction to Islamic Archaeology

The scope of this book is wide-ranging and includes methods of searching for and locating buried remains, their practical recovery, the decay of human and associated death scene materials, the analysis and identification.

In the Beginning

First published in 2001. Routledge is an imprint of Taylor & Francis, an informa company.

Archaeology: A Very Short Introduction

This introduction to the archaeology of the Islamic world traces the history of the discipline from its earliest manifestations through to the present, evaluating the contribution made by archaeology to the understanding of key aspects of Islamic culture.

The Past in the Present

In the Beginning

An Introduction to the Archaeology of the Western Mojave Desert, California

South American Archaeology

The History of Archaeology: An Introduction provides global coverage with chapters devoted to particular regions of the world. The regional approach allows readers to understand the similarities and differences in the history of and approach to archaeology in various parts of the world. Each chapter is written by a specialist scholar with experience of the region concerned. Thus the book focuses on the earliest beginnings of archaeology in different parts of the world, and how it developed from being a pastime for antiquarians and collectors to a serious attempt to obtain information about past societies. Woven into the text are various boxes that explore key archaeologists, sites and important discoveries in the history of archaeology enriching the story of the discipline 's development. With such far ranging coverage, including an exploration of the little covered development of Russian and Chinese archaeology, The History of Archaeology is the perfect introduction to the history of archaeology for the interested reader and student alike.

An Introduction to Zooarchaeology

Forgotten Africa introduces the general reader and beginning student to Africa's past, emphasizing those aspects only known or best known from archaeological and related evidence. It covers four million years of history across the continent, examining important aspects of Africa's momentous human story. Graham Connah is concerned to raise public awareness, both inside and outside Africa, to this frequently overlooked and often forgotten subject. Forgotten Africa examines: * human origins, * the

material culture of hunter gatherers * the beginnings of African farming, the development of metallurgy * the emergence of distinctive artistic traditions * the growth of cities and states * the expansion of trading networks * the impact of European and other external contacts. The result is a fascinating and important story told in a straightforward and readable manner.

Archaeological Science

A lively and accessible introduction to themes and debates in archaeological theory for students of all levels Archaeological Theory is a relatable, accessible, reader-friendly first step into the world of theory for archaeology students. Recognizing that many students shy away from the study of theory for fear that the material is too difficult or obscure, Archaeological Theory maintains that any student can develop an understanding of theory and that a knowledge of theory will lead to better practice. As one of the leading texts for introductory courses in archaeology and archaeological theory, it has provided many students with the essential foundation for a complete education in the discipline. With a focus on clarifying the history and development of archaeological theory, this valuable text serves as a roadmap to the different schools of theory in archaeology, clarifying the foundations of these schools of thought, the relationships between them, and the ideas that distinguish each from the other. Students will also learn about the relationship between archaeology and cultural and political developments, the origins of New and ' post-processual ' archaeology, and current issues shaping the field. Written in a clear and informal style and incorporating examples, cartoons, and dialogues, this text provides an ideal introduction for students at all levels. The revised third edition has been updated with new and revised chapters and an expanded glossary and bibliography, as well as new readings to guide further study. Engages readers with informal and easy-to-understand prose, as well as examples, cartoons, and informal dialogues Prepares students to understand complex topics and current and perennial issues in the field such as epistemology, agency, and materiality in the context of archaeological practice Discusses current developments in associated disciplines New and revised chapters on the material turn, politics and other issues, and an expanded glossary and bibliography with updated reading suggestions Offers expanded coverage of materiality, cultural-historical archaeology, evolutionary theory, and the work of scholars of diverse backgrounds and specializations Engaging and illuminating, Archaeological Theory is an indispensable resource for undergraduate and graduate students in archaeology and related disciplines.

An Introduction to Archaeological Chemistry

Method and Theory in Archaeology Archaeology: A Brief Introduction is an introduction to the fundamental principles of method and theory in archaeology, exposing students to archaeology as a career. The text begins by covering the goals of archaeology, and then moves on to consider the basic concepts of culture, time, and space, by discussing the finding and excavation of archaeological sites. By providing a distinct emphasis on the ethics behind archaeology, and how we should act as stewards of the finite records of the human past, Archaeology: A Brief Introduction continues to be a book with a truly international perspective, not simply focusing on North America or Europe. Teaching and Learning Experience Improve Critical Thinking - Archaeology: A Brief Introduction's "Archaeology and

You" chapter provides students with career advice in an era when archaeology is transitioning from predominantly academic to professional. Engage Students - Each chapter within Archaeology: A Brief Introduction highlights important finds that have shaped our archaeological perspective, and a global perspective that shows students that archaeology is the most global of all sciences, encompassing all of humanity.

The Present Past

Originally published in 1912, this pioneering and highly illustrated textbook made South American archaeology more accessible to the general reader.

The Archaeology Coursebook

A guide for scholars, students, and non-professional general readers from one of the most experienced, articulate contemporary biblical archaeologists. Fritz covers the physical and human geography of the Holy Land and the history of its exploration, excavation techniques, and the archaeologically attested history of Palestine from the Neolithic to the Hellenistic-Roman period. This is an ideal textbook for undergraduate students.

An Introduction to Pawnee Archeology

* A state-of-the art orientation to contemporary archeological method * Maps, diagrams, and full-color photographs bring past human civilizations to life * Companion Web site features professor-and student-friendly resources

An Introduction to Biblical Archaeology

Unlike most textbooks on heritage which discuss the creation of heritage as a cultural phenomenon or offer practical guides to heritage practices, Archaeology and Heritage takes a fresh approach by providing an introduction to themes in the field of heritage as it relates to the material legacy of our past. A survey of current approaches to theorizing archaeological practice presents some ideas about how we understand and relate to the remains, sites, structures and buildings that have come to our present from the past. The book is divided into seven chapters, each preceded by a short interlude which considers the types of literature and ways of talking about heritage which characterize that approach. For those not already acquainted with recent archaeological theory, the book provides a brief introduction to current trends. Each chapter is in turn divided into key points indicated by sub-headings, and these key points are reiterated at the end of each chapter and are followed by a list of suggested readings.

The History of Archaeology

Archaeology: An Introduction looks behind the popular aspects of archaeology such as the discovery and excavation of sites, the study of human remains and animal bones, radiocarbon dating, museums and 'heritage' displays, and reveals the methods used by archaeologists. It also explains how the subject emerged from an amateur pursuit in the eighteenth century into a serious discipline, and explores changing fashions in interpretation in recent decades. This fifth edition has been updated by a new co-author, Tom Moore, and continues to include key references and guidance to help new readers find their way through the ever expanding range of archaeological publications. It conveys the excitement of new archaeological discoveries that appear on television or in newspapers while helping readers to evaluate them by explaining the methods and theories that lie behind them. Above all, while serving as a

Lucid textbook, it remains a very accessible account that will interest a wide readership. In addition to drawing upon examples and case studies from many regions of the world and periods of the past, it incorporates the authors' own fieldwork, research and teaching and features a new four-colour text design and colour illustrations plus an additional 50 topic boxes. The comprehensive glossary and bibliography are complemented by a support website hosted by Routledge to assist further study and wider learning. It includes chapter overviews, a testbank of questions, powerpoint discussion questions, web-links to support material for every chapter plus an online glossary and image bank. New to the fifth edition: inclusion of the latest survey techniques updated material on the development in dating, DNA analysis, isotopes and population movement coverage of new themes such as identity and personhood how different societies are defined from an anthropological point of view and the implications of this for archaeological interpretation the impact of climate change and sustainability on heritage management more on the history of archaeology Visit the companion website at www.routledge.com/textbooks/greene for additional resources, including: chapter overviews a testbank of questions PowerPoint discussion questions links to support material for every chapter an online glossary and image bank
