I'm a bit of a prepper. Tracked this down after reading about it on Don Rearic.com and am glad I did. No gimmicks, just straight out practical survival advise from an expert. Some of the info is a bit dated now (e.g.: survival kits) but the basic survival info is still just as sound to day as it was when the book was written near 30 years ago. Highly recommend.--Kimberly Reedy on Amazon.com.

try to climb out, the deeper we sink. But what if there were another way? What if we knew the right strategies to escape the traps we have fallen into? What if we could spot traps from a distance, and avoid them entirely? In this book, authors David M. R. Covey and Stephan M. Mardyks train you in the art of Trapology. You'll meet Alex and Victoria, who have fallen into traps you're sure to recognize. As you read their stories, you'll learn about the seven most common traps in life and work, and how even the smartest and seemingly most accomplished people find themselves stuck and unable to see their way out. Traps are masters of disguise, but there are telltale signs that give them away every time. If you discover that you're trapped right now, consider this book your lifeline—the lessons contained in *Trap Tales* will teach you how to escape these traps and how to sidestep them in the future. - Learn the seven biggest traps in life and work that catch people unaware
- Identify the traps that are holding you back right now
- Discover your escape route and climb out of the quicksand
- Become a “Trapologist” and avoid traps altogether

As established markets become less profitable, companies increasingly need to find ways to create and capture new markets. Despite much investment and commitment, most firms struggle to do this. What, exactly, is getting in their way? The authors of the best-selling book *Blue Ocean Strategy* have spent over a decade exploring that question. They have seen that the trouble lies in managers' mental models--ingrained assumptions and theories about the way the world works. Though these models may work perfectly well in mature markets, they undermine executives' attempts to discover uncontested new spaces with ample potential (blue oceans) and keep companies firmly anchored in existing spaces where competition is bloody (red oceans). This article describes how to break free of these red ocean traps. To do that, managers need to: (1) Focus on attracting new customers, not pleasing current customers; (2) Worry less about segmentation and more about what different segments have in common; (3) Understand that market creation is not synonymous with either technological innovation or creative destruction; and (4) Stop focusing on premium versus low-cost strategies. The Harvard Business Review Classics series offers you the opportunity to make seminal Harvard Business Review articles a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world--and will have a direct impact on you today and for years to come.

William Carnegie "This manual is intended to provide as much practical insight into the various modes of trapping, snaring, and netting the animals and birds of the British Isles as can be furnished by writing. Whenever possible and desirable, such insight is given of the haunts and habitats of the creatures to be caught as may prove useful to the amateur or tyro, for whom it is more particularly planned, than for the professional. Every piece of work, device, trap, snare, or net described has been performed, employed, or made by the author, and it is hoped that the experience gained during many years may prove of advantage to others who may be induced to follow the Art of the Trapper, either for pastime or profit"

AMBROSE From his Foreword “In a down-to-earth style, *Death Traps* tells the compelling story of one man’s assignment to the famous 3rd Armored Division that spearheaded the American advance from Normandy into Germany. Cooper served as an ordnance officer with the forward elements and was responsible for coordinating the recovery and repair of damaged American tanks.
