The Fertility Sourcebook

Goat science covers quite a wide range and varieties of topics, from genetics and breeding, via nutrition, production systems, reproduction, milk and meat production, animal health and parasitism, etc., up to the effects of goat products on human health. In this book, several parts of them are presented within 18 different chapters. Molecular genetics and genetic improvement of goats are the new approaches of goat development. Several factors affect the passage rate of digesta in goats, but for diet properties, goats are similar to other ruminants. Iodine deficiency in goats could be dangerous. Assisted reproduction techniques have similar importance in goats like in other ruminants. Milk and meat production traits of goats are almost equally important and have significant positive impacts on human health. Many factors affect the health of goats, heat stress being of increasing importance. Production systems could modify all of the abovementioned characteristics of goats.

and landscape scales. Part IV. The social dimensions of ISFM: The role of ISFM in gender empowerment, ISFM and household nutrition, Capacity building in ISFM, ISFM in the policy arena, Marketing support for ISFM, Advancing ISFM in Africa. Appendices: Mineral nutrient contents of some common organic resources.

Integrated Soil Fertility Management in Africa

By all indicators, the reproductive health of Americans has been deteriorating since 1980. Our nation is troubled by rates of teen pregnancies and newborn deaths that are worse than almost all others in the Western world. *Science and Babies* is a straightforward presentation of the major reproductive issues we face that suggests answers for the public. The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to reproductive health; why people in the United States have fewer contraceptive choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should "shop" for a fertility service and make consumer-wise decisions; and what we can expect in the future--featuring interesting accounts of potential scientific advances.

Written by one of the country's leading complementary fertility specialists, *The Baby-Making Bible* draws together Emma Cannon's years of experience and success in treating couples hoping to get pregnant. Her special plan blends the ancient wisdom of Chinese medicine with the highest standards in Western medical practice. Whether you are trying for a natural conception or undergoing treatment for assisted conception, she offers a practical plan you can follow to create a fertile environment and encourage healthy baby-making. Emma approaches fertility in its widest context by taking you through her essential couples' health and lifestyle check, and makes suggestions to help you

The Fertile Secret: Guide to Living a Fertile Life is a comprehensive tool for improving your fertility. This unique blend of Eastern and Western medicine prepares the reader for a life-changing journey to a healthy and fertile life. Focusing on the body's natural ability to evolve and change, Dr. Kiltz highlights the many ways that you can take an active role in your fertility. Whether you are conceiving naturally or with the help of Assisted Reproductive Technologies (ART), this guide will serve as a personal and intimate resource along the way. Focusing on the 10 core facets of fertility wellness, The Fertile Secret: Guide to Living a Fertile Life offers multiple tools to support you on your journey. While conceiving is the ultimate goal, you will find revitalized fertility in all aspects of your life as you become more present, aware, and peaceful. You will embody fertility, in its truest form.

Fertility and Sterility

Identifying and Addressing the Needs of Adolescents and Young Adults with Cancer is the summary of a workshop convened by the Institute of Medicine's National Cancer Policy Forum in July 2013 to facilitate discussion about gaps and challenges in caring for adolescent and young adult cancer patients and potential strategies and actions to improve the quality of their care. The workshop featured invited presentations from clinicians and other advocates working to improve the care and outcomes for the adolescent and young adult population with cancer. Cancer is the leading disease-related cause of death in adolescents and young adults. Each year nearly 70,000 people between the ages of 15 and 39 are diagnosed with cancer, approximately 8 times more than children under age 15. This population faces a variety of unique short- and long-term health and psychosocial issues, such as difficulty reentering school, the workforce, or the dating scene; problems with infertility; cardiac, pulmonary, or other treatment repercussions; and secondary malignancies. Survivors are also at increased risk for psychiatric conditions such as anxiety, depression, substance abuse, and suicide and may have difficulty acquiring health insurance and paying for needed care. Identifying and Addressing the Needs of Adolescents and Young Adults with Cancer discusses a variety of topics important to adolescent and young adult patients with cancer, including the ways in which cancers affecting this group differ from cancers in other age groups and what that implies about the best treatments for these cancer patients. This report identifies gaps and challenges in providing optimal care to adolescent and young adult patients with cancer and to discuss potential strategies and actions to address them.
