Growing Plantation Forests

Forest plantations covered 187 million hectares in 2000, of which Asia accounted for 62 percent. The forest plantation area represents a significant increase from the 1995 estimate of 124 million hectares. The reported new annual planting rate is 4.5 million hectares globally, with Asia and South America accounting for 89 percent.

The Step By Step Guide to Creating Your Forest Garden

Whatever their motivation, plantation forest growers want their plantations to be healthy and grow rapidly to achieve their purpose as soon as possible. This book discusses how this is done. It is written for a worldwide audience, from forestry professionals and scientists through to small plantation growers, and describes how plantations may be grown responsibly and profitably.

Growing Plantation Forests eBook by P. W. West

Ebook PDF Format Growing Plantation Forests

Plantation forests are grown to supply wood and to provide environmental benefits, such as waste disposal, rehabilitation of degraded sites, enhancement of regional biodiversity and reduction of logging in native forests. In a highly readable fashion, this book describes the scientific principles which are used throughout the world to ensure rapid, healthy plantation growth.

Chapter 3. Forest plantations

Written by Amy Grotta, University of Oregon. Plantation forests are a type of managed forest in which the trees are planted (as opposed to naturally regenerated), of the same age and generally of the same species, and are intended to maximize the production of wood fiber. Trees in a plantation forest are usually planted uniformly in rows to maximize the site's growing space and resources, to ensure uniform growth, and to facilitate the use of mechanized harvesting equipment.

Forest Plantations - an overview | ScienceDirect Topics

Tree plantation does just that, by growing trees to create a profit for investors, help communities by growing trees that create jobs and growing trees to support the environment, sequester carbon and combat climate change. Besides combating Climate Change, growing the right kind of trees has socio-economic benefits as well.

Plantation Forests and Climate Change - Climate, Forests

The plantation process. Forestry is the science of establishing, managing and conserving forests, while management of a plantation forest is known as silviculture. ForestrySA operates as an innovative and sustainable plantation forestry business, producing and marketing high quality products. This task is challenging by the long term nature of forestry, the changing and greater demands of society forest products and environmental responsibilities, recreation and unpredictable nature of fire,

to agriculture than to traditional management of native-species forests; eg, in plantations there may be intensive site preparation, weed control, fertilizer use, pest control, relatively frequent uses of heavy machines for harvest and planting with associated impacts on soils. Many plantations are on abandoned agricultural land and therefore seem aesthetically and socially acceptable as landscape components; this may be in
