Small and large telescopes are being installed all around the world. Astronomers have thus acquired better access to more modern equipment; not in the least to photometers, which are very important tools for the contemporary observer. This development of higher quality and more sensitive equipment makes it very necessary to improve the accuracy of the measurements. This guide helps the astronomer and astronomy student to improve the quality of their photometric measurements and to extract a maximum of information from their observations. The book is based on the authors' observing experience, spending numerous nights behind various instruments at many different observatories.

"It is 1483, and Sir Thomas Lemuel Hawke, a Cornish knight, is about to ride into battle. On the eve of his departure, he composes a letter to his four young children, consisting of twenty virtues that provide instruction on how to live a noble life, and on all the lessons, large and small, that he might have imparted to them himself were he not expecting to die on the battlefield. "Why am I alive? Where was I before I was born? What will happen to me when I die? Whatever well our lives are drawn from, it is deep, wild, mysterious, and unknowable" Rules for a Knight is many things: a code of ethics; an intimate record of a lifelong quest; a careful recounting of a knight's hardest won lessons, deepest aspirations, and most richly instructive failures; and an artifact, a relic of a father's exquisite love. Drawing on the ancient

teachings of Eastern and Western philosophy and religion, on literature, and poetry, and on the great spiritual and political writings of our time, Ethan Hawke has written a parable that--in the story of a young man's journey toward a life of authenticity and meaning--captures the instinctive movement of the heart toward truth and beauty. Rules for a Knight has the appeal of Arthurian legend; the economy of Aesop; and the vitality, intelligence, and risk-taking that could only emanate from Ethan Hawke"--

Going well beyond first aid, this manual describes medical secrets used by an experienced African mission doctor and former assistant professor of emergency medicine at Harvard Medical School. The tips are pragmatic, affordable, and useful for anyone from medics to laypersons, but are particularly aimed at people who work and live in remote areas with scarce resources. The subjects cover antibiotic therapy, advanced care of complex wounds, laceration closure with glue, malaria, oral rehydration therapy, fecal transplantation, and more. Each chapter contains references for further reading and is written in a concise style that maximizes useful information. The material is specifically aimed at people who work in complex environments away from centralized resources -- military special forces, extreme travelers, open water sailors, expedition members, humanitarian aid workers, and anyone who lives in the developing world. The material is useful to anyone who wishes to become more medically knowledgeable and self-sufficient, regardless of circumstance. While it does not substitute for skilled physician care, it will allow readers an understanding of how medical decisions are made by experts and in some cases, how to provide intermediate or complex medical care when a physician is not available.

There are many reasons why you might need to learn a foreign language quickly—perhaps an unexpected business trip or a sudden travel opportunity. A. G. Hawke, a U.S. Army Green Beret, often travels to foreign countries on short notice and has been able to work intimately with officials who do not speak English. Frequently, he needs to be able to communicate in a foreign language in a matter of days or weeks. He tried all types of schools, classes, books, and tapes, but none delivered what he needed when he needed it. Subsequently, he developed his own method for learning languages. It proved so effective for him (he is certified by the military in seven languages) and his fellow Green Berets that he decided to share it with others who are struggling to learn a foreign language on the quick. The Quick and Dirty Guide to Learning Languages Fast is designed for people who have no time for learning complicated rules of grammar. Hawke promises that his method will help anyone become functional in any language in as little as seven days and proficient in thirty days. How? Because he has trimmed that fat for you, freeing your time for what 's truly useful. Hawke provides a detailed day-by-day schedule, a hands-on workbook format, and secret tips to help you master the key elements of any new language. In true Special Forces style, this quick-and-dirty method contains no fluff; it 's all action so you can quickly get into the action yourself. If your mission is to learn a foreign language, why not learn how from the very best?

Extreme Wilderness Survival is a compilation of the real-life tactics that wilderness instructor Craig Caudill has built and really used, especially during two nature sabbaticals when he lived in the woods for nearly 30 days with only a knife. Through his extensive training with some of the best martial artists in the country and his experience as the chief instructor at Nature Reliance School, Craig has become a go-to expert in the outdoor survival community. In the book, he first teaches readers the most important safety tactic—how to set the right mentality and awareness before heading outside. Craig then teaches about basic survival needs and how to meet them depending on whether you have reliable man-made gear or no gear. He covers navigation, self-defense, shelter and warmth, water and food. Each chapter starts with a true story of outdoor adventure gone right or wrong, analyzing what should have been done differently. The book covers the basics for outdoor enthusiasts who want to stay safe but have limited survival knowledge. It then dives into tactics for those ready for more advanced wilderness survival long-term, either solo or in a group. Extreme Wilderness Survival is an experience-based resource for keeping yourself and others safe on any nature excursion.

Why we should prepare for climate change now by taking anticipatory action in vulnerable regions. Global momentum is building to reduce greenhouse gas emissions. So far, so good. The less happy news is that Earth's temperatures will continue to rise for decades. And evidence shows that climbing temperatures are already having serious consequences for vulnerable people and regions through droughts, extreme weather, and melting glaciers. In this book, climate experts Michael Mastrandrea and Stephen Schneider argue that we need to start adapting to climate change, now. They write that these

Free Copy PDF Hawkes Special Forces Survival Handbook The Portable Guide To Getting Out Alive

efforts should focus primarily on identifying the places and people most at risk and taking anticipatory action—from developing drought-resistant crops to building sea walls. The authors roundly reject the idea that reactive, unplanned adaptation will solve our problems—that species will migrate northward as climates warm, and farmers will shift to new crops and more hospitable locations. And they are highly critical of “geoengineering” schemes that are designed to cool the planet by such methods as injecting iron into oceans or exploding volcanoes. Mastrandrea and Schneider insist that smart adaptation will require a series of local and regional projects, many of them in the countries least able to pay for them and least responsible for the problem itself. Ensuring that we address the needs of these countries, while we work globally to reduce emissions over the long term, is our best chance to avert global disaster and to reduce the terrible, unfair burdens that are likely to accompany global warming.

From the moment I am born, I am like no-one else around me. I am a fish out of water. Even in the pool. Leisel Jones is rightly regarded as one of the greatest breaststrokers ever. At just fifteen, she won two silver medals at the Sydney Olympic Games in 2000; she went on to win gold at Athens and Beijing, and at London 2012 became the first Australian swimmer to compete at four Olympics. For the first time, Leisel candidly describes what it’s like to be thrust into the limelight so young. She reveals the constant pressure she was under – from coaches, from the media and from herself – to be perfect. Despite the highs of her swimming stardom, she suffered depression, and at one time planned to take her own life. In London, criticised in the media for her weight, and appalled by the bullying and dysfunction in the Australian swim team, Leisel nevertheless handled herself with great composure. She has emerged with maturity and good humour, having finally learnt how to be herself and live with confidence. *Body Lengths* is the inspiring story of an Australian sporting hero, told with humour, optimism and style.

Rules for a Knight

This book tells the story of the renaissance of the Kurna language, the language of Adelaide and the Adelaide Plains in South Australia, principally over the earliest period up until 2000, but with a summary and brief discussion of developments from 2000 until 2016. It chronicles and analyses the efforts of the Nunga community, and interested others, to reclaim and relearn a linguistic heritage on the basis of mid-nineteenth-century materials. This study is breaking new ground. In the Kurna case, very little knowledge of the language remained within the Aboriginal community. Yet the Kurna language has become an important marker of identity and a means by which Kurna people can further the struggle for recognition, reconciliation and liberation. This work challenges widely held beliefs as to what is possible in language revival and questions notions about the very nature of language and its development.
