The Horseman's Year

For centuries Christians believed that God granted humanity dominion over the animal kingdom, meaning that we had a moral right to kill, manage, and eat animals including wildlife. Recently, however, environmental and animal rights activists have assaulted this traditional perspective. They argue that dominion as expressed in meat eating and hunting has resulted in species extinction and environmental degradation. Christian Animal Rights (CAR) activists suggest that the church must reevaluate its traditional beliefs in light of the fact that God's original creation was free of human on animal violence. God, they argue, did not want man's dominion to be expressed through trapping, killing, and eating of animals. These violent activities only came about after the Fall, as God condescended to our hardness of heart. CAR activists point to Christ's sacrificial work of reconciliation as a model for modern Christian behavior: as Christ sacrificed for us, we should avoid eating meat and hunting as ways we can participate in Christ's non-violent work of reconciling creation to himself. In this book, Stephen Vantassel investigates the biblical, ethical, and scientific arguments employed by the CAR movement concerning human-wildlife relations. In this regard, the book engages in practical theology by addressing several important questions: How should Christians treat our wildlife neighbors? Has the Church been wrong in its understanding of human dominion? Does God want Christians to avoid hunting, trapping, fishing, and to adopt a vegetarian lifestyle? This book provides answers to these questions by detailing a theology the author calls, Shepherdism.

Basic Horse Care

Gunshot injuries. Breeding disasters. Controlling trainers, nutty horse owners, warm hearted clients and "laugh-out-loud-funny stories that you just can't make up"- Dr. Courtney deals with it all in this lively series of tales about the life of a mobile vet in the Colorado Rockies. In her stories from thirteen years as a mobile horse vet, whether running IV - fluids on top of a mountain or squaring off against an unethical cutting horse owner who calls her "Little Lady," Diehl makes us laugh, cry and smile. It's a journey that brings the reader onto the farms and into the clinic and shows what it's really like to be a mobile veterinarian.

Horse Owner's Guide to Toxic Plants is a must-have, exclusive reference book for all horse owners, and the first of its kind on the subject of equines and plants. Keep this book in the medicine cabinet in the barn. Walk around the pastures with the book in hand, especially in late spring or early summer. Or pack it with on a trail ride. It just might save your horse's life. Horse Owner's Guide to Toxic Plants is organized according to types of plants—trees, bushes, shrubs, and vines, ferns and plants, weeds and wildflowers, and grasses and horsetails. Since visuals are very important for correct identification, clear color photographs are shown, including wherever possible a close-up photograph and line drawing to better identify each plant. Horsewoman Sandra McQuinn has researched and compiled information on more than 100 more common but toxic plants that grow in backyards, pastures, and on the range and trail. Also included is advice from a veterinarian on how to recognize the symptoms of poisonings in your horse and what steps you or your own veterinarian should take if you suspect your horse has eaten a toxic plant. Brimming with pertinent information and expert advice, Horse Owner's Guide to Toxic Plants is a must-have for all equine aficionados. No horse owner should be without it, including those who board their horses.
