Boys Love Manga and Beyond

Until recently there had been relatively little integration of programs of research on teaching, learning, curriculum, and assessment. However, in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment. The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain. Integrating a number of different research perspectives is a complex task, and ways must be found to reduce the complexity without sacrificing the integration. The research discussed in this volume is tied together because it deals with a common content strand. During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children. The areas of addition and subtraction, algebra, rational numbers, and geometry are notable examples. Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching, learning, curriculum, and assessment is an open question. The perspectives presented in this volume illustrate the potential for adopting this perspective.

Archangels and Ascended Masters is a thoroughly researched book in a lively encyclopedia format, listing 77 divinities from Greek, Roman, Egyptian, Asian, Babylonian, Tibetan, Buddhist, Celtic, Theosophical, New Age, Catholic, Cabalistic, Jewish, and Christian roots. Doreen carefully studied and wrote about the history of each deity, what role they serve today, how they can help us with specific life problems, and how to call upon each one. Doreen spent time in communication with each divinity to ensure that the being was reachable, and to discover the essence of his or her personality and current dealings with the world—and within these pages, she includes a channeled message or impression from each of the ascended masters and archangels. Many of her channelings were conducted at power points throughout the world, such as Stonehenge in England; the Irish coast; Kona, Hawaii; and the New Zealand rain forest. A comprehensive chart lists a number of life situations, such as Addictions, Finding a Soulmate, Emergency Money, Healing Physical Illness, and various personal and family concerns. Beneath each topic is the list of whom to call upon when dealing with that particular challenge. Doreen also includes prayers to call upon multiple divinities for specific issues such as "increased clairvoyance" and "resolving conflict."

Boys Love Manga and Beyond looks at a range of literary, artistic and other cultural products that celebrate the beauty of adolescent boys and young men. In Japan, depiction of the “beautiful boy” has long been a romantic and sexualized trope for both sexes and commands a high degree of cultural visibility today across a range of genres from pop music to animation. In recent decades, “Boys Love” (or simply BL) has emerged as a mainstream genre in manga, anime, and games for girls and young women. This genre was first developed in Japan in the early 1970s by a group of female artists who went on to establish themselves as major figures in Japan’s manga industry. By the late 1970s many amateur women fans were getting involved in the BL phenomenon by creating and self-publishing homoerotic parodies of established male manga characters and popular media figures. The popularity of these fan-made products, sold and circulated at huge conventions, has led to an increase in the number of commercial titles available. Today, a wide range of products produced both by professionals and amateurs are brought together under the general rubric of “boys love,” and are rapidly gaining an audience throughout Asia and

globally. This collection provides the first comprehensive overview in English of the BL phenomenon in Japan, its history and various subgenres and introduces translations of some key Japanese scholarship not otherwise available. Some chapters detail the historical and cultural contexts that helped BL emerge as a significant part of girls' culture in Japan. Others offer important case studies of BL production, consumption, and circulation and explain why BL has become a controversial topic in contemporary Japan.

Remarkable reinterpretation of Milton and his poetry by one of the most famous historians of the 17th Century In this remarkable book Christopher Hill used the learning gathered in a lifetime's study of seventeenth-century England to carry out a major reassessment of Milton as man, politician, poet, and religious thinker. The result is a Milton very different from most popular imagination: instead of a gloomy, sexless 'Puritan', we have a dashing original thinker, branded with the contemporary reputation of a libertine. For Hill, Milton is an author who found his real stimulus less in the literature of classical and times and more in the political and religious radicalism of his own day. Hill demonstrates, with originality, learning and insight, how Milton's political and religious predicament is reflected in his classic poetry, particularly 'Paradise Lost' and 'Samson Agonistes'.

Ensuring long-term care (LTC) is one of the most urgent problems in health care today. Demographic trends are expected to lead to a higher proportion of old and very old people in the global population. As a result, an increased proportion of global income will be devoted to LTC services. With this in mind, *Long-term Care: Economic Issues and Policy Solutions* aims to address the following important objectives: to provide a detailed analysis of the arrangements and institutions designed to protect the disabled and dependent elderly people in various countries, and to try to evaluate their respective merits. to discuss the projections of future costs of protection for dependent elderly, and to assess the impact of improvements in disability-free life expectancy on the future cost of care and choices between informal and formal care. to present empirical research on these decisions, with special consideration of primary caregivers, and on the substitution between in kind and cash benefits as well as between institutional (or formal) care and home (or informal) care. to analyze different theoretical approaches in modeling decisions referring to LTC services to be provided both within and between generations. With its mix of empirical, theoretical and policy-related contributions, *Long-term Care: Economic Issues and Policy Solutions* will be of interest not only to health economists, but also to social scientists, health insurers, and public policy advocates.
