Childlessness in Europe: Contexts, Causes, and Consequences

Education, Labor Force Participation and Changing Fertility Patterns

Population Reports

The United States is in the midst of a major demographic shift. In the coming decades, people aged 65 and over will make up an increasingly large percentage of the population: The ratio of people aged 65+ to people aged 20-64 will rise by 80%. This shift is happening for two reasons: people are living longer, and many couples are choosing to have fewer children and to have those children somewhat later in life. The resulting demographic shift will present the nation with economic challenges, both to absorb the costs and to leverage the benefits of an aging population. *Aging and the Macroeconomy: Long-Term Implications of an Older Population* presents the fundamental factors driving the aging of the U.S. population, as well as its societal implications and likely long-term macroeconomic effects in a global context. The report finds that, while population aging does not pose an insurmountable challenge to the nation, it is imperative that sensible policies are implemented soon to allow companies and households to respond. It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape.

## Reproductive and Developmental Toxicology

Hysterectomy is a very common type of surgery and can be a life-saving operation for some women with certain types of cancer or torrential uterine haemorrhage. It can also improve the quality of life for women who experience menometrorrhagia, uterine leiomyomata, endometriosis or uterine prolapse. However, before embarking on hysterectomy, it is important to be aware of and understand all the options available, medical or conservative surgical, as well as their risks and benefits. The most determinant factors for choosing one or another approach are uterine size, organ mobility, parity and previous pathology, in integration with best research evidence, clinical expertise and patient values and expectations. This book is intended for all specialties involved in health care for women.

## World Employment Programme

Miombo woodlands and their use: overview and key issues. The ecology of miombo woodlands. Population biology of miombo tree. Miombo woodlands in the wider context: macro-economic and inter-sectoral influences. Rural households and miombo woodlands: use, value and management. Trade in woodland products from the miombo region. Managing miombo woodland. Institutional arrangements governing the use and the management of miombo woodlands. Miombo woodlands and rural livelihoods: options and opportunities.

## Methods of Demographic Analysis

Originally published in 2006, this is a comprehensive and definitive account of the human male gamete. The volume summarizes many unique and revealing characteristics of the sperm cell. It provides a detailed overview of human sperm production, maturation and function, and looks at how these processes affect and influence fertility, infertility and ART. The volume thus provides a detailed review of the most important research and developments, augmented with pertinent references. This book will appeal to all practitioners and scientists in reproductive medicine and in particular to clinical scientists, graduate and post-graduate scientists, and laboratory personnel.

## Determinants of Fertility in Developing Countries: Supply and demand for children

This book deals with women and socioeconomic change in twentieth century Sweden. The main focus is on how women's education and labor force participation have affected fertility over time. Although many perceive Sweden as a country where men and women hav

## The Miombo in Transition

CSA Sociological Abstracts abstracts and indexes the international literature in sociology and related disciplines in the social and behavioral sciences. The database provides abstracts of journal articles and citations to book reviews drawn from over 1,800+ serials publications, and also provides abstracts of books, book chapters, dissertations, and conference papers.

## Global Burden of Disease and Risk Factors

This book provides an up-to-date overview of demographic analysis and methods, including recent developments in demography. Concepts and methods, from the nature of demographic information through data collection and the basics of statistical measures and on to demographic analysis itself are succinctly explained. Measures and analyses of fertility, mortality, life tables, migration and demographic events such as marriage, education and labour force are described while later chapters cover multiple decrement tables, population projections, the importance of testing and smoothing demographic data, the stable population model and demographic software. An emphasis on practical aspects and the use of real-life examples based on data from around the globe make this book accessible, whilst comprehensive references and links to data and other resources on the internet help readers to explore further. The text is concise and well written, making it ideally suited to a wider audience from students to academics and teachers. Students of demography, geography, sociology, economics, as well as professionals, academics and students of marketing, human resource management, and public health who have an interest in population issues will all find this book useful.

## Levels and Trends of Fertility and Their Determinants for Small Geographic Areas in the ESCAP Region

This definitive and essential source of reference has been thoroughly up-dated and revised to meet the requirements of all laboratories involved in the analysis of human semen. The book sets out the fundamental laboratory techniques that should be employed in the diagnosis of male infertility. The text includes descriptions of how to construct a conventional semen profile and provides standardized protocols for performing several optional diagnostic procedures. Such techniques are essential in the evaluation of infertile couples and in assessing fertility in men whose sperm production is suppressed by potential anti-fertility compounds or by toxic agents: they are also of interest in forensic medicine and in connection with artificial insemination. Previous editions of this volume have established themselves as the gold standard in the area of fertility investigation and treatment: this new edition continues that tradition and will be the benchmark for setting more rigorous standards for future years.

This volume, “ Fertility of Immigrants: A Two-Generational Approach in Germany ” by Dr. Nadja Milewski, is the sixth book of a series of Demographic Research Monographs published by Springer Verlag. Dr. Milewski is now working for the University of Rostock, but at the time she wrote the book, she was a research scientist at the Max Planck Institute for Demographic Research. The book is a slightly-revised version of her doctoral dissertation ( “ Fertility of Immigrants and Their Descendants in West Germany: An Event History Approach ” ), which she completed at the Max Planck Institute and submitted to the

University of Rostock. She was awarded highest honors, summa cum laude, for her dissertation. As Professor Jan Hoem wrote in his review of Dr. Milewski ' s dissertation, the research focuses on the patterns and levels of childbearing among immigrant women. Given Germany ' s varied immigration experience with refugees, asylum seekers, guest workers, and foreign-born persons of German ancestry, Dr. Milewski ' s topic is of particular interest, especially with regard to differences in the patterns and levels of childbearing among various kinds of immigrants to Germany vs. native-born Germans. Numerous empirical and theoretical studies of childbearing among immigrants to various countries have been published and Dr. Milewski carefully reviews them. While earlier studies have tended to be rather fragmentary, particularly for European populations, Dr. Milewski ' s research provides a comprehensive picture of the recent female fertility of post-war migrants and their descendants in West Germany, with an emphasis on migrants who came to Germany to work.

The new edition of this canonical text on male reproductive medicine will cement the book's market-leading position. Practitioners across many specialties - including urologists, gynecologists, reproductive endocrinologists, medical endocrinologists and many in internal medicine and family practice - will see men with suboptimal fertility and reproductive problems. The book provides an excellent source of timely, well-considered information for those training in this young and rapidly evolving field. While several recent books provide targeted 'cookbooks' for those in a male reproductive laboratory, or quick reference for practising generalists, the modern, comprehensive reference providing both a background for male reproductive medicine as well as clinical practice information based on that foundation has been lacking until now. The book has been extensively revised with a particular focus on modern molecular medicine. Appropriate therapeutic interventions are highlighted throughout.

## Factors Affecting Contraceptive Use in Sub-Saharan Africa

## Biodemography of Fertility in Japan

This book has a strong theoretical focus and is unique in addressing both mortality and fertility over the full span of human history. It examines the demographic transition in the change in the human condition from high mortality and high fertility to low mortality and low fertility. It asks if fluctuating populations is a new phenomenon, or if there has long been an inherent tendency in Man to maximize survival and to control family size.

## Genetics of Male Infertility

Reproductive toxicology is a complex subject dealing with three components—parent, placenta, and fetus—and the continuous changes that occur in each. Reproductive and Developmental Toxicology is a comprehensive and authoritative resource providing the latest literature enriched with relevant references describing every aspect of this area of science. It addresses a broad range of topics including nanoparticles and radiation, gases and solvents, smoking, alcohol and drugs of abuse, food additives, nutraceuticals and pharmaceuticals, and metals, among others. With a special focus on placental toxicity, this book is the only available reference to connect the three key risk stages, and is the only resource to include reproductive and developmental toxicity in domestic animals, fish, and wildlife. Provides a complete, integrated source of information on the key risk stages during reproduction and development Includes coverage of emerging science such as stem cell application, toxicoproteomics, metabolomics, phthalates, infertility, teratogenicity, endocrine disruption, surveillance and regulatory considerations, and risk assessment Offers diverse and unique in vitro and in vivo toxicity models for reproductive and developmental toxicity testing in a user-friendly format that assists in comparative analysis

## Aging and the Macroeconomy

This book presents original data on the proximate determinants of fertility in Japan. Its goal is to disaggregate low fertility levels in Japan into physiological, behavioral, and social components. Further, the book reviews previous studies on the proximate determinants of fertility in Japan, and compares the data to that on other countries. This book is the first to summarize previous research projects conducted in Japan on this topic, and proposes future research directions to fill the remaining research gaps. Further, it sheds new light on the similarities and differences between the fertility level in Japan and in other countries in terms of biodemographical components, helping readers understand the mechanisms of fertility change in Japan.

## Male Fertility Patterns and Determinants

Population growth in Africa has laid the foundation for the eventual development of a prosperous region. Since the 1950s, sub-Saharan Africa has doubled its population twice over to become one of the most populous regions in the world. If sub-Saharan Africa succeeds in taking advantage of this population potential,

the sub-continent could become a major player in the world economy. A major reason sub-Saharan Africa remains poor is a high child-dependency arising from its high fertility rate combined with a low life expectancy based on both high infant mortality and high adult mortality rates. Reduced mortality and lower fertility are key requirements if sub-Saharan Africa is to enter a development trajectory that makes possible increasing per capita incomes and reductions in poverty.

### The OECD Observer

This book discusses the biological, methodological and sociological issues that have caused men to be overlooked in demographic and sociological literature of fertility. It explores the patterns and determinants of male fertility and studies male fertility rates as compared to those of females in 43 countries and places, over time. Data used in the aggregate level analysis come from multiple sources, including the 2001 United Nations Demographic Yearbook, the 1964 to 2004 Taiwan-Fukien Demographic Yearbooks, and National Statistics Reports by the Statistics Bureau of Republic of China. To explore male fertility determinants, the book analyzes individual data from the 2002 National Survey of Family Growth (NSFG) in the United States. The findings presented here demonstrate that male fertility differs from female fertility in both rates and determinants, which suggests that female fertility cannot fully represent human fertility.

### Same-Sex Families and Legal Recognition in Europe

This book discusses current trends in contraceptive use, socioeconomic and program variables that affect the demand for and supply of children, and the relationship of increased contraceptive use to recent fertility declines.

### Demographic Transition Theory

Strategic health planning, the cornerstone of initiatives designed to achieve health improvement goals around the world, requires an understanding of the comparative burden of diseases and injuries, their corresponding risk factors and the likely effects of intervention options. The Global Burden of Disease framework, originally published in 1990, has been widely adopted as the preferred method for health accounting and has become the standard to guide the setting of health research priorities. This publication sets out an updated assessment of the situation, with an analysis of trends observed since 1990 and a chapter on the sensitivity of GBD estimates to various sources of uncertainty in methods and data.

Fertility, Biology, and Behavior: An Analysis of the Proximate Determinants presents the proximate determinants of natural fertility. This book discusses the biological and behavioral dimensions of human fertility that are linked to intermediate fertility variables. Organized into nine chapters, this book begins with an

overview of the mechanisms through which socioeconomic variables influence fertility. This text then examines the absolute and relative age-specific marital fertility rates of selected populations. Other chapters consider the trends in total fertility rates of selected countries, including Colombia, Kenya, Korea, Indonesia, Mexico, Pakistan, France, and United States. This book discusses as well the effects of deliberate marital fertility control through contraception and induced abortion. The final chapter deals with the management of sex composition and implications for birth spacing. This book is a valuable resource for reproductive physiologists, social scientists, demographers, statisticians, biologists, and graduate students with an interest in the biological and behavioral control of human fertility.

### WHO Laboratory Manual for the Examination of Human Semen and Sperm-Cervical Mucus Interaction

This book is published open access under a CC BY 4.0 license. This open access book provides an overview of childlessness throughout Europe. It offers a collection of papers written by leading demographers and sociologists that examine contexts, causes, and consequences of childlessness in countries throughout the region. The book features data from all over Europe. It specifically highlights patterns of childlessness in Germany, France, the United Kingdom, Finland, Sweden, Austria and Switzerland. An additional chapter on childlessness in the United States puts the European experience in perspective. The book offers readers such insights as the determinants of lifelong childlessness, whether governments can and should counteract increasing childlessness, how the phenomenon differs across social strata and the role economic uncertainties play. In addition, the book also examines life course dynamics and biographical patterns, assisted reproduction as well as the consequences of childlessness. Childlessness has been increasing rapidly in most European countries in recent decades. This book offers readers expert analysis into this issue from leading experts in the field of family behavior. From causes to consequences, it explores the many facets of childlessness throughout Europe to present a comprehensive portrait of this important demographic and sociological trend.

### Socio-economic Determinants and Fertility Pattern in Lesotho

This unique, case-based guide provides a thoughtful and comprehensive overview of the genetic basis of male infertility for the practicing clinician. In addition to discussing the molecular foundations of sperm production and the consequences of genetic abnormalities on various stages of sperm development, it examines the clinical aspects of acknowledged genetic disorders and their implications on male fertility. In so doing, it offers the necessary tools required by the clinician for the

diagnosis and treatment of infertile men with genetic abnormalities. Moreover, it provides essential algorithms that may aid in counseling patients in the clinic. The text is arranged in four thematic sections for easy reference. The genetic foundation of male reproduction is presented in part 1, including regulation of sperm production, the structure of sperm chromatin, and spermatogenesis. The impact of genetic abnormalities on male infertility is the subject of part 2, covering sperm defects, mitochondrial function and DNA fragmentation. The clinical case material in part 3 illustrates real-world examples of genetic etiologies and the current diagnostic and therapeutic strategies for conditions such as vas asplasia, cryptorchidism, immotile cilia syndrome, sperm aneuploidy and other challenging scenarios. Casting forward, the fourth and final section presents an overview of future possibilities for management of genetic causes of male infertility, including gene editing. Fully exploring the clinical context of these genetic conditions in a practical manner that appeals to the practicing clinician, *Genetics of Male Infertility* is an exciting and essential text for reproductive medicine specialists, andrologists, urologists, researchers and all other clinicians treating infertile patients.

This open access book focuses on family diversity from a legal, demographical and sociological perspective. It investigates what is at stake in the life of homosexuals in the field of family formation, parenting and parenthood, what it brings to everyday life, the support of the law, and what its absence implies. The book shows the paths leading to the adoption of laws while demographic analyses concentrate on the link between registration of same-sex marriages and same-sex parenting with a detailed focus on Spain. The sociological chapters in this book, based upon qualitative surveys in France, Iceland and Italy, underline how the importance of the legal structure influenced the daily life of homosexual families. As such this book is an interesting read to lawyers, demographers, sociologists, behavioural scientists, and all those working in the field.--Provided by publisher.
