### The Art of Breakfast

This book examines new developments in the area of human competence and coping behavior. It sets forth a conceptual framework that considers the interplay between environmental contexts and personal resources and their impact on how individuals cope with life transitions and crises. The selections cover the tasks confronted in varied life crises and describe the coping strategies employed in managing them. The material identifies the long-term effects of such life events as divorce and bereavement as well as the way in which these stressors can promote personal growth and maturity. The book contains a broad selection of recent literature on coping and adaptation, integrative commentaries that provide the background for each of the areas as well as conceptual linkages among them, and an introductory overview that presents a general perspective on human competence and coping. Illustrative case examples are included. The first part of the book is organized chronologically according to developmental life transitions confronted by many people—from the childhood years through adolescence, career choice and parenthood, divorce and remarriage, middle age and retirement, and death and bereavement. The second part covers unusual life crises and other hazards that typically involve extreme stress such as man-made and natural disasters and terrorism. The book highlights

The new edition of this established textbook, now with full colour illustration, has been extensively revised and continues to provide a comprehensive, stimulating, readable and authoritative coverage of freshwater habitats, their communities and their functioning, the world over. The work will be of great value to undergraduate and graduate students, fellow researchers and water managers, and the plain language and lack of jargon should make it accessible to anyone interested in the functioning and current state of lakes and rivers. Having taught and researched over fifty years and six continents, Professor Brian Moss makes here extensive use of his personal experience as well as the huge literature now available on freshwaters. This is the fifth edition of his textbook, which, since the first edition in 1980, has steadily evolved to reflect a rapidly changing science and environment. It places increasing emphasis

on the role of people in damaging and managing freshwaters as we move into the Anthropocene epoch and face unprecedented levels of climate and other changes, whilst rejoicing in the fascination of what are left of near pristine freshwater ecosystems. Professor Moss retired from the University of Liverpool following a career in Africa, the USA and the UK. He was awarded medals by the International Society for Limnology, of which he was President from 2007 to 2013, and The Institute of Ecology and Environmental Management. He was given The Ecology Institute's Excellence in Ecology Prize in 2009 and the book written for that prize, Liberation Ecology, was awarded the British Ecological Society's best ecology book prize in 2013.

### Moo's Law

In this book, Mathias Albert develops an ambitious theoretical framework that describes world politics as a specific social system set within the wider political system of world society. Albert's analysis of the historical evolution and contemporary form of world politics takes the theory of social differentiation as its starting point. World politics is a specific, relatively recent form of politics and Albert shows how the development of a distinct system of world politics first began during the long nineteenth century. The book goes on to identify the different forms of social differentiation that underlie the variety of contemporary forms of organizing political authority in world politics. Employing sociological and historical perspectives, A Theory of World Politics also reflects critically on its relation to accounts of world politics in the field of international relations and will appeal to a wide readership in a range of fields.

## Quality of Earnings

An Introduction to Real Estate Finance serves as the core of knowledge for a single-semester first course in real estate finance. Unlike other real estate finance textbooks, with their encyclopedic but often stale details, it combines a short traditional text with a living website. The book gives students and professors highly applied information, and its regularly updated online features makes it especially useful for this practitioner-oriented audience. It covers fundamental topics such as accounting and tax, mortgages, capital markets, REITs and more. It also addresses the 2008 financial crisis and its impact on the real estate profession. This text is a valuable companion for students of real estate finance as well as financial analysts, portfolio managers, investors and other professionals in the field. Offers a concise, efficient, "finance-centric" alternative to traditional real estate finance texts Website gives readers the tools to find current information about their own areas of specialization—a unique approach not found in other real estate finance textbooks Gives students and professors the material to examine every subject in broad and highly detailed terms

## Encyclopedia of Virtual Communities and Technologies

The first book focusing specifically on frequent and frequently disabling side effects involving the skin, hair and nails in cancer patients According to the World Health Organization, there are approximately thirty million people living with a diagnosis of cancer – the majority of whom will receive surgery, systemic therapy, and/or radiation, and who will suffer from dermatologic adverse events. Dermatologists and oncologists are only beginning to grapple with these events, which pose serious quality-of-life issues with so many patients, and will become more prevalent as survival rates improve, thanks in part to new cancer treatments and drug regimens. Concentrating on a topic that has only been briefly touched upon by other texts, this book offers a focused perspective on the clinical presentation, underlying pathophysiologic mechanisms, and management of skin, hair, and nail conditions for oncologists, dermatologists, and allied practitioners. *Dermatologic Principles and Practice in Oncology: Conditions of the Skin, Hair, and Nails in Cancer Patients:* – Covers in detail the dermatologic adverse events of oncologic therapies, clinical presentations, and treatment recommendations – Enables dermatologists and other practitioners to significantly improve the care of patients with cancer – Addresses the dermatologic adverse events of cancer therapies used globally, of which a large number are found in developing countries – Emphasizes prophylactic measures – based on treatments used and type of cancer – to prevent the appearance of adverse events – Provides built-in discussions on patient education for practical counseling during therapies – Offers rapid-reference sections on topical dermatology drugs The first book to present dermatologic conditions in cancer patients and survivors in a uniform and in-depth manner, *Dermatologic Principles and Practice in Oncology* is ideal for oncologists, oncology nurses, and dermatologists who wish to take better care of those with

## Sustainability and Social Responsibility of Accountability Reporting Systems

When this classic text was first published in 1992 it provided a unique focus for the burgeoning concern for sustainability and sustainable organizational practices. The book's impact continues to be felt today as large multinational corporations are making substantial commitments to the 'triple bottom line' of economic success, social responsibility, and environmental protection, and sustainability has become a part of curricula in business schools around the globe. Featuring extensive new material throughout, this new edition of "Management for a Small Planet" maintains the same unique vision and approach that made the original so influential. Unlike other texts on the topic, it employs a strategic, general management perspective within theoretical frameworks on how organizations can be instrumental in moving humankind toward a more sustainable world. Part I includes chapters dedicated to each dimension of sustainability: biophysical, economic, and social. Part II contains the specifics on the formulation and implementation of sustainable management practices, all grounded in the principles of organizational behavior, leadership, and business strategy. The book is an ideal text for any course concerned with environmental management and sustainable management practices.

ground that bridges leadership studies, curriculum theory, and Didaktik. It proposes a non-affirmative education theory and its core concepts along with discursive institutionalism as an analytical tool to bridge these fields. It concludes with implications of its coherent theoretical framing for future empirical research. Recent neoliberal policies and transnational governance practices point toward new tensions in nation state education. These challenges affect governance, leadership and curriculum, involving changes in aims and values that demand coherence. Yet, the traditionally disparate fields of educational leadership, curriculum theory and Didaktik have developed separately, both in terms of approaches to theory and theorizing in USA, Europe and Asia, and in the ways in which these theoretical traditions have informed empirical studies over time. An additional aspect is that modern education theory was developed in relation to nation state education, which, in the meantime, has become more complicated due to issues of "globopolitanism". This volume examines the current state of affairs and addresses the issues involved. In doing so, it opens up a space for a renewed and thoughtful dialogue to rethink and re-theorize these traditions with non-affirmative education theory moving beyond social reproduction and social transformation perspectives.

### Managing the Drug Discovery Process

Managing the Drug Discovery Process: How to Make It More Efficient and Cost-Effective thoroughly examines the current state of pharmaceutical research and development by providing chemistry-based perspectives on biomedical research, drug hunting and innovation. The book also considers the interplay of stakeholders, consumers, and the drug firm with attendant factors, including those that are technical, legal, economic, demographic, political, social, ecological, and infrastructural. Since drug research can

be a high-risk, high-payoff industry, it is important to researchers to effectively and strategically manage the drug discovery process. This book takes a closer look at increasing pre-approval costs for new drugs and examines not only why these increases occur, but also how they can be overcome to ensure a robust pharmacoeconomic future. Written in an engaging manner and including memorable insights, this book is aimed at redirecting the drug discovery process to make it more efficient and cost-effective in order to achieve the goal of saving countless more lives through science. A valuable and compelling resource, this is a must-read for all students and researchers in academia and the pharmaceutical industry. Considers drug discovery in multiple R&D venues, including big pharma, large biotech, start-up ventures, academia, and nonprofit research institutes Analyzes the organization of pharmaceutical R&D, taking into account human resources considerations like recruitment and configuration, management of discovery and development processes, and the coordination of internal research within, and beyond, the organization, including outsourced work Presents a consistent, well-connected, and logical dialogue that readers will find both comprehensive and approachable

### Billion Dollar Burger

A fast-paced, gripping insider account of the entrepreneurs and renegades racing to bring lab-grown meat to the world. The trillion-dollar meat industry is one of our greatest environmental hazards; it pollutes more than all the world's fossil-fuel-powered cars. Global animal agriculture is responsible for deforestation, soil erosion and more emissions than air travel, paper mills and coal mining combined. It also depends on the slaughter of more than 60 billion animals per year, a number that is only increasing as the global appetite for meat swells. The whole world seems to be sleepwalking into a food crisis. But a band of doctors, scientists, activists and entrepreneurs have been racing to end animal agriculture as we know it, hoping to fulfill a dream of creating meat without ever having to kill an animal. This is the story of a group of seven vegans quietly working to solve one of the most pressing issues we face today, creating the biggest upheaval to the food business in decades along the way. In *Billion Dollar Burger*, Chase Purdy explores the companies at the cutting edge of the nascent food technology sector, from polarizing activist-turned-tech CEO Josh Tetrick to lobbyists and regulators on both sides of the issue. *Billion Dollar Burger* follows the people fighting to upend our food system as they butt up against the entrenched interests fighting viciously to stop them. It will take readers on a truly global journey from Silicon Valley to China, by way of Israel and the UK. The stakes are monumentally high: cell-cultured meat is the best hope for sustainable food production, a key to fighting climate change, a gold mine for

the companies that make it happen and an existential threat for the farmers and meatpackers that make our meat today.

cleaner, safer, sustainable meat—real meat—without the animals. From the entrepreneurial visionaries to the scientists' workshops to the big business boardrooms—Shapiro details that quest for clean meat and other animal products and examines the debate raging around it. Since the dawn of Homo sapiens some quarter million years ago, animals have satiated our species' desire for meat. But with a growing global population and demand for meat, eggs, dairy, leather, and more, raising such massive numbers of farm animals is woefully inefficient and takes an enormous toll on the planet, public health, and certainly the animals themselves. But what if we could have our meat and eat it, too? The next great scientific revolution is underway—discovering new ways to create enough food for the world's ever-growing, ever-hungry population. Enter clean meat—real, actual meat grown (or brewed!) from animal cells—as well as other clean foods that ditch animal cells altogether and are simply built from the molecule up. Whereas our ancestors domesticated wild animals into livestock, today we're beginning to domesticate their cells, leaving the animals out of the equation. From one single cell of a cow, you could feed an entire village. And the story of this coming "second domestication" is anything but tame.

## The Liverworts, Mosses and Ferns of Europe

This book assesses the normative and practical challenges for artificial intelligence (AI) regulation, offers comprehensive information on the laws that currently shape or restrict the design or use of AI, and develops policy recommendations for those areas in which regulation is most urgently needed. By gathering contributions from scholars who are experts in their respective fields of legal research, it demonstrates that AI regulation is not a specialized sub-discipline, but affects the entire legal system and thus concerns all lawyers. Machine learning-based technology, which lies at the heart of what is commonly referred to as AI, is increasingly being employed to make policy and business decisions with broad social impacts, and therefore runs the risk of causing wide-scale damage. At the same time, AI technology is becoming more and more complex and difficult to understand, making it harder to determine whether or not it is being used in accordance with the law. In light of this situation, even tech enthusiasts are calling for stricter regulation of AI. Legislators, too, are stepping in and have begun to pass AI laws, including the prohibition of automated decision-making systems in Article 22 of the General Data Protection Regulation, the New York City AI transparency bill, and the 2017 amendments to the German Cartel Act and German Administrative Procedure Act. While the belief that something needs to be done is widely shared, there is far less clarity about what exactly can or should be done, or what effective regulation might look like. The book is divided into two major parts, the first of which focuses on features common to most AI systems, and explores how they relate to the legal framework for data-driven technologies, which already exists in the form of (national and supra-national) constitutional law, EU data protection and competition law, and anti-discrimination law. In the second part, the book examines in detail a number of relevant sectors in which AI is increasingly shaping

decision-making processes, ranging from the notorious social media and the legal, financial and healthcare industries, to fields like law enforcement and tax law, in which we can observe how regulation by AI is becoming a reality.

Are nuclear weapons useful for coercive diplomacy? This book argues that they are useful for deterrence but not for offensive purposes.

## Coping with Life Crises

Tens of millions of people today are living part of their life in a virtual world. In places like World of Warcraft, Second Life, and Free Realms, people are making friends, building communities, creating art, and making real money. Business is booming on the virtual frontier, as billions of dollars are paid in exchange for pixels on screens. But sometimes things go wrong. Virtual criminals defraud online communities in pursuit of real-world profits. People feel cheated when their avatars lose virtual property to wrongdoers. Increasingly, they turn to legal systems for solutions. But when your avatar has been robbed, what law is there to assist you? In *Virtual Justice*, Greg Lastowka illustrates the real legal dilemmas posed by virtual worlds. Presenting the most recent lawsuits and controversies, he explains how governments are responding to the chaos on the cyberspace frontier. After an engaging overview of the history and business models of today's virtual worlds, he explores how laws of property, jurisdiction, crime, and copyright are being adapted to pave the path of virtual law. Virtual worlds are becoming more important to society with each passing year. This pioneering study will be an invaluable guide to scholars of online communities for years to come.

While transport is a precondition for social and economic interactions, it has negative impacts (crashes, pollution and greenhouse gas emissions). The study identifies main challenges and opportunities to accelerate transition to sustainability. It promotes an understanding of the five defining dimensions of sustainable transport - accessibility, affordability, safety, security and environmental performance. It brings theoretical insights and best practices from around the world and maps similarities and differences among countries in their efforts towards sustainability.

### Nuclear Weapons and Coercive Diplomacy

This book explores sustainability and social responsibility from the point of view of accountability reporting systems. The contributions to this volume open up discussions about the theory and application of sustainability and social responsibility across various corporate sectors and assists the reader in applying sustainable corporate social responsibility reporting across those sectors. As a central theme, the book addresses how the theory and application in sustainability and social responsibility has different dimensions and aspects which are impossible to apply across different sectors. This point of view is supported by chapter contributions from countries around the world including Turkey, Serbia, Malaysia, United States, South Africa, Italy, China, Brasil, Romania, Serbia, Puerta Rico, Algeria. Academics worldwide will discover in Sustainability and Social Responsibility of Accountability Reporting Systems: A Global Approach the latest developments about corporate social responsibility and sustainability of accountability reporting systems.

## Moose's Law

Making Room for People elaborates on preferences in housing. It explores how users, occupants, and citizens can express their needs, searching for the enhancement of individual choice and control over their residential environment, and the predicted positive spin-off's for urban collectives. The central question is: What are the conditions under which an increase of people's choice and voice over the places they inhabit contribute to more liveable urban areas? The options to make choices and to have a say in urban design and housing matters are used as a conceptual framework. "Choice" and "voice" are the main concepts that structure the empirical material.

## Clean Meat

Moo's Law is the latest title from successful investor Jim Mellon, to help readers understand the investment landscape in cultivated and plant-based proteins and materials. Jim has a vision that within the next couple of decades world agriculture will be radically transformed by the advent of cultivated meat technology. This book grounds the reader in why such an advancement is absolutely necessary and informs them of the investments they could make to become part of the New Agricultural Revolution themselves. The harrowing effects on our environment, animal cruelty in food and fashion, and the struggling ability to feed the world's ever-growing population gives us no choice but to grow meat in labs or derive our proteins from plant-based sources. Not only this, he outlines what he sees as the major hurdles to the industry's success in terms of scalability of production and the smart designing of

### The Epistle to the Romans

The Most Important Lessons in Economics and Finance: A Comprehensive Collection of Time-Tested Principles of Wealth Management represents the fruits of an audacious undertaking: the pursuit of the most effective economic and financial principles from the dawn of record keeping to the present day. Using everyday terms and readily grasped concepts, Dr. Anthony M. Criniti IV, a former financial consultant and current university-level finance professor, sets out to expand off the new paradigm of the economic and financial concepts introduced in his previous book, The Necessity of Finance; explore the most important lessons in economics and finance; provide a platform for economic and financial entities to be able to better manage their wealth; and create a foundation for future research studies on these subjects. Dr. Criniti breaks down complex terminology and scholastic discoveries in economics and finance into layman's terms, allowing readers of all levels of economic and financial acumen to put his powerful wealth management principles into practice. Starting with an introductory overview, moving forward to present the basic terminology necessary to understand the structure of this work, presenting in the process an elaboration on its scientific aspects, The Most Important Lessons in Economics and Finance will equip a variety of practitioners and students of these two sciences with vital information and a clear approach for continued study. This book is organized into a variety of categories of wealth management principles including: business, charity, debt, diversification, economics, ethics, financial

psychology, health, human resources, international finance, investing, marketing, money, personal finance, planning, and saving. Dr. Criniti's lessons evolved from his many years of various experiences in the financial field. Aiming for objectivity, he links his practical knowledge to the works of leading historical and contemporary economic and financial scholars, producing a work that stands as one of the most accessible and comprehensive collections of wealth management principles in publication. Mastering wealth management skills takes time and patience. With *The Most Important Lessons in Economics and Finance*, Dr. Criniti provides a foundation for this most essential task.

## Business Performance Measurement

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation.
