Following a short introduction to the species and its closest commercially viable related species, namely pirapatinga (*Piaractus brachypomus*) and pacu (*Piaractus mesopotamicus*), this field guide provides practical information on the culture and reproduction of tambaqui (*Colossoma macropomum*). As a field guide it aims to support the understanding and dissemination of applicable technologies for the culture and reproduction of tambaqui, i.e. what should be done – as well as when and how it should be done – in order to achieve success in the artificial propagation as well as the fingerling and table fish production stages. The concise technical descriptions in this guide are accompanied by self-explanatory illustrations and a reader-friendly glossary of technical terms, which is important for tambaqui aquaculture farmers.

### **Interventional Radiology**

A fascinating and beautifully illustrated volume that explains what street trees tell us about humanity's changing relationship with nature and the city Today, cities around the globe are planting street trees to mitigate the effects of climate change. However, as landscape historian Sonja Dümpelmann explains, this is not a new phenomenon. In her eye-opening work, Dümpelmann shows how New York City and Berlin began systematically planting trees to improve the urban climate during the nineteenth century, presenting the history of the practice within its larger social, cultural, and political contexts. A unique integration of empirical research and theory, Dümpelmann's richly illustrated work uncovers this important untold story. Street trees—variously regarded as sanitizers, nuisances, upholders of virtue, economic engines, and more—reflect the changing
