Creating a Successful Retirement

Oregon Labor Trends

Household survey data consistently depict large variations in saving and wealth among households with similar socio-economic characteristics. Within the context of the life cycle hypothesis, families with identical lifetime resources might choose to accumulate different levels of wealth for a variety of reasons, including variation in time preference rates risk tolerance, exposure to uncertainty, relative tastes for work and leisure at advanced ages income replacement rates, and so forth. These factors can be divided into a small number of classes, each with a distinctive implication concerning the relation between accumulated wealth and the shape of the consumption profile. By examining this relation empirically for the presence or absence of these particular explanations for differences in wealth. Using the Panel Study of Income Dynamics and the Consumer Expenditure Survey little support for life cycle models that rely on the above factors to explain wealth variation. The data are, however, consistent with rule of thumb or mental accounting theories of wealth accumulation.

Part-time Work in the Canadian Economy

Retirement and Economic Behavior

Recent policy has focused on alleviating poverty among the elderly, with varying degrees of success. Gains to some subsets of the elderly population have come at the expense of others. A component of the policy debate has been identifying factors which might influence labor force participation decisions and

the effects such decisions will have on retirement income and its adequacy for a growing elderly population. While models of retirement behavior are becoming increasingly sophisticated, most fail to capture key elements such as expectations and uncertainty. This is in part due to the reduced form nature of policy experiments; parameters are estimated under a current policy and used to predict effects of an alternative scenario. Such an approach implicitly assumes that the only difference in the alternative setting is the change in policy and does not adequately account for endogeneity of decisions and responses to these changes. This paper reviews factors affecting the labor supply decision, their interactions with and implications for subsequent retirement income, and identifies important methods and data requirements necessary to model complicated dynamic behavior more accurately

Public Employees' Retirement Law

An Early Retirement Alternative for Baby Boomers "Full Time RVing"

Factors Affecting Labor Supply Decisions and Retirement Income

The United States is in the midst of a major demographic shift. In the coming decades, people aged 65 and over will make up an increasingly large percentage of the population: The ratio of people aged 65+ to people aged 20-64 will rise by 80%. This shift is happening for two reasons: people are living longer, and many couples are choosing to have fewer children and to have those children somewhat later in life. The resulting demographic shift will present the nation with economic challenges, both to absorb the costs and to leverage the benefits of an aging population. *Aging and the Macroeconomy: Long-Term Implications of an Older Population* presents the fundamental factors driving the aging of the U.S. population, as well as its societal implications and likely long-term macroeconomic effects in a global context. The report finds that, while population aging does not pose an insurmountable challenge to the nation, it is imperative that sensible policies are implemented soon to allow companies and households to respond. It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape.

Wages and Benefits in Wyoming

A brief introduction to Full-Time RVing as a lifestyle for retirement. Many Baby Boomers are nearing an age where they might want an early escape from the daily grind of work. This book will provide you with information that explains how full-time RVing can be an affordable alternative for early retirement. It will provide basic knowledge to get you started down the road to fulfilling everyones dream of enjoying life before its too late.

Retirement Planning Handbook

Retirement Is a Full-Time Job

[This book] provides tools and insights for university and college administrators to use when evaluating changes in retirement policy, and it presents valuable information in the form of case studies concerning changes in retention policies and retirement policies. Lisa M. Dickson, *Industrial and Labor Relations Review* This volume, a collection of papers presented at the 2004 TIAA-CREF Institute conference on higher education, contains many excellent chapters. John Heuer, *Journal of Pension Economics and Finance* This book enlightens the reader about two important policy issues, health care provision and retirement plans, by addressing both broad macro issues and specific concerns of higher education administrators. Such content is both valuable and practical for the concerned higher education researcher and administrator. Marc Kaulisch, *The Review of Higher Education* Attracting and retaining highly qualified faculty is essential to maintaining productivity at institutions of higher education. Colleges and universities are at a critical juncture in their history as they attempt to achieve their teaching and research goals. This volume examines some of the most pressing employment and compensation issues confronting academic administrators. Contributors discuss topics such as: ageing of faculty, changing economic conditions and shifts in faculty employment patterns, rapid increases in health care costs and trends in retiree health insurance, and adoption of phased and early retirement programs. The volume also includes a series of case studies on how individual universities are confronting these challenges. Institutions in these case studies include: Syracuse University, the University of North Carolina, the University of California, institutions in the Association of New American Colleges, and other colleges and universities included in several surveys and research projects. This timely volume will appeal to academic administrators at colleges and universities in the US and internationally as they face the common challenges of rising employment costs, faculty aging and global competition. Researchers interested in the future of higher education, economics, and the academic labor market in general will find this a valuable addition to their library.

Second-Act Careers

Permanent Part-time Employment

This book reviews, summarizes, and integrates a diverse literature on the topic of retirement and provides a coherent view to better inform researchers and practitioners. Organized around three phases of the retirement process--pre-retirement, retirement decision-making, and post-retirement--the chapters examine economic, sociological, gerontological, and psychological theory and research. Topics discussed include: types of retirement, retirement planning and preparation, early retirement incentive programs, the economics of the retirement decision-making, and work after retirement, among others. Contributors include Jerome Kaplan, Kenneth Shultz, Harvey Sterns, and Linda Stroh.

American Attitudes Toward Pensions and Retirement

In response to demographic change many countries in the European Union have reformed their pension systems. During the last two decades personal pensions have been introduced in Belgium, Denmark, France, Germany, Ireland, Italy, Poland, Sweden, and the UK. This book is a critical examination of the objectives of personal pensions in these countries and the use of tax incentives to encourage individuals to save for their retirement. It also includes discussion on personal pensions in the United States. The volume focuses on issues such as risk, administrative expense, and the role of tax allowances in encouraging personal pension provision. Based on the evidence from these countries it is concluded that expectations relating to the take up of personal pensions have not been met and that EU countries should not rely on personal pensions to improve income adequacy at the lower end of the income distribution. Academics and researchers teaching and studying employee benefits and pension costs - particularly in countries that have recently reformed their pension systems - will warmly welcome this book. Government bodies involved in pension reform and European Commission institutions concerned with the evolution and problems with pension policy within the EU will also find this book an informative and invaluable read.

Recruitment, Retention, and Retirement in Higher Education

Retirement is perhaps the greatest time for self-discovery. You may not believe it, but Christ has something incredible in store for you in your new role! It all begins with an assessment of your focus. In light of this, Dr. Richard Johnson presents you with the 15 keys that will help you redefine yourself. He begins by setting the stage for your new world of opportunity, helping you to move away from the external, material, achievement-oriented definition of self toward a more personal, genuine, and spiritual definition. It is this reorientation that will help you steer clear of the possible frustrations of retirement and give you a newfound sense of optimism. Each chapter opens with stories of retirees from all walks of life. Dr. Johnson uses their life-lessons to cull out pearls of wisdom for your future. Plus, he includes affirming prayers to draw you closer to the God who loves you and who wants to make your life a success. Finally, Dr. Johnson presents 15 self-evaluation exercises that will help you plan in a comprehensive way for the shift to retirement. Paperback

Faculty Early Retirement

This Twentieth Edition of ANNUAL EDITIONS: AGING 07/08 provides convenient, inexpensive access to current articles selected from the best of the public press. Organizational features include: an annotated listing of selected World Wide Web sites; an annotated table of contents; a topic guide; a general introduction; brief overviews for each section; a topical index; and an instructor's resource guide with testing materials. USING ANNUAL EDITIONS IN THE CLASSROOM is offered as a practical guide for instructors. ANNUAL EDITIONS titles are supported by our student website, www.mhcls.com/online.

Describes fourteen options for retirement living, outlines some costs, and discusses positive and negative factors for each option

Retirement

This book brings together in one volume what researchers have learned about workers, employers, and retirees that is important for formulating retirement income policies. As the U.S. population ages, there is increasing uncertainty about the solvency of the Social Security and Medicare systems and the adequacy of private pensions to provide for people's retirement needs. The volume covers such critical behaviors as workers' decisions to retire, people's choices of saving over consumption, and employers' decisions about hiring older workers and providing pension and health care benefits. Also covered are trends in mortality, health status, and health care costs that are key to projecting the likely costs and effects of alternative retirement income security policies and a strategy for combining data and research knowledge into a policy modeling framework.

Retirement Preparation

The population of Asia is growing both larger and older. Demographically the most important continent on the world, Asia's population, currently estimated to be 4.2 billion, is expected to increase to about 5.9 billion by 2050. Rapid declines in fertility, together with rising life expectancy, are altering the age structure of the population so that in 2050, for the first time in history, there will be roughly as many people in Asia over the age of 65 as under the age of 15. It is against this backdrop that the Division of Behavioral and Social Research at the U.S. National Institute on Aging (NIA) asked the National Research Council (NRC), through the Committee on Population, to undertake a project on advancing behavioral and social research on aging in Asia. *Aging in Asia: Findings from New and Emerging Data Initiatives* is a peer-reviewed collection of papers from China, India, Indonesia, Japan, and Thailand that were presented at two conferences organized in conjunction with the Chinese Academy of Sciences, Indian National Science Academy, Indonesian Academy of Sciences, and Science Council of Japan; the first conference was hosted by the Chinese Academy of Social Sciences in Beijing, and the second conference was hosted by the Indian National Science Academy in New Delhi. The papers in the volume highlight the contributions from new and emerging data initiatives in the region and cover subject areas such as economic growth, labor markets, and consumption; family roles and responsibilities; and labor markets and consumption.
