Historically, national security includes the strength of our nation's infrastructure, the foundation upon which the continuous growth of our society depends. This includes our strong societal and moral codes, the rule of law, stable government, social, political, and economic institutions, and leadership. Also included are our nation's schools and educational programs to ensure a knowledgeable citizenry and lifelong learning—a must for a democracy. Our nation's strength also requires investments in science, engineering, research and development, and technological leadership. We cannot be strong without a viable way to power our cities, feed ourselves, and move from one place to another. Most of all, a strong economy is an essential ingredient of a global superpower. Without it, we will lose our superpower status, and quickly. National security must include a healthy market-based economy, with a strong base of globally competitive products and services that produce jobs. This economy must include sound government policies to promote responsible choices and reduce our debt, and grand strategies for energy and environmental sustainability, science and technology leadership (at least in some areas), human capital capabilities, manufacturing, and the industrial base. And these are not the only components. National security goes to the very core of how we define who we are as a people and a free society. It concerns how we view our world responsibilities. Economic security is a major element of national

security, even as borders are less important than ever. No matter how we look at national security, there can be no question of the need to include the economic viability of our nation. Without capital, there is no business; without business, there is no profit; without profit, there are no jobs. And without jobs, there are no taxes, and there is no military capability. The viability of a nation's industrial infrastructure, which provides jobs for its people, creates and distributes wealth, and leverages profits, is essential. Without jobs, the quality of peoples' lives deteriorates to a point where society itself can disintegrate. It can also lead to strife on many different levels. As a nation, we need to find a strategy to deal with this, and we will discuss the ideas of expeditionary economics. But poverty is not only a problem in Third World countries. It can occur at home, too-especially during a deep recession. No community, local or global, can sustain indefinitely whole populations of "haves" and "have nots." And that gap is now growing within the United States. There is no question that a part of the infrastructure of a nation must include a sound economy. It was the relative deterioration of the Japanese and German economies that led those nations into World War II. Poverty around the world is a global systemic issue that frequently can and does lead to political instability. But we cannot help others if we cannot help ourselves, and our current economic crisis is a warning. National security is societal, political, and economic strength. In today's world, national security for a superpower is meaningless without a strong military capability as well. The sovereignty and security of the United States, and the protection of its citizens and property around the world, remain the bedrock of national security. The execution of U.S. national security strategy is conducted in a highly volatile global environment characterized by quantum changes in technology; unprecedented social, economic, and political interdependencies; broadened opportunities to foster democratic principles; and allegiances and alliances frequently founded on interests other than traditional nationalism. Understanding the complex systems nature of national security and why the

economy is a part of the equation is crucial. National Defense University.

With Our Backs to Berlin

"The world is tipping into chaos. Why? a In this acclaimed and influential book, Pulitzer Prize-winning columnist Bret Stephens shows how the retreat of American power, orchestrated by Barack Obama, has created the power vacuums now being filled by our enemies. From Vladimir Putin's quest to restore the old czarist empire, to China's efforts to dominate the South China Sea, to Iran's nuclear ambitions, to

ISIS's dreams of an Islamic caliphate, we have entered an era in which our foes no longer fear us and our friends no longer trust us. With his stylistic flair and analytical brilliance, Stephens explains the ideological roots of Obama's suspicions of American power. He demonstrates how a false belief in American decline has led to a disastrous prescription of retreat, as if the cure for domestic weakness is international weakness. In a prophetic chapter, he warns of what the world could look like in 2019 if we do not change course. And he lays out the right formula for U.S. foreign policy—the same formula that brought order to our once crime-ridden streets. America in Retreat is shaping the greatest foreign policy debate of our decade. 'An exceptionally intelligent, well-written book filled with interesting data and analysis that's well worth reading—and I don't even agree with most of it. Stephens (is) fast becoming the most influential conservative writer on foreign policy. So read it to your delight, or to hone your best arguments against it.' Fareed Zakaria, Fareed Zakaria GPS 'An important book for your well-being.' Bill O'Reilly, The O'Reilly Factor 'This book is the Wall Street Journal columnist at his best—substantive, historically informed, and with the kind of cutting style that helped him earn his Pulitzer Prize two years ago.' The Weekly Standard Bret Stephens has written not just a good book on American foreign policy. He has written an important book . . . Anyone even minimally conversant with human nature and history - and Mr. Stephens is far more than that - understands exactly the dangers that are caused by an American Retreat and the lethal global disorder it makes inevitable.' The American Spectator 'With a command of American history, a mastery of big foreign policy ideas, and a supple grasp of the conundrums of current events, Stephens shows that the dichotomy between domestic and international responsibilities is facile. For the world's sole superpower, international affairs inevitably impinge on our economy and our security. Defending our principles abroad advances our interests at home.' Peter Berkowitz, Real Clear Politics 'Given the U.S.'s recently renewed commitments in the

Prepping can be a challenge for new preppers as well as old pros. New preppers can be overwhelmed by the amount of tasks that need to be accomplished. The Seven Step Survival Plan provides a blueprint that prioritizes the different aspects of preparedness and breaks them down into achievable goals. Seasoned preppers often get overweight in one particular area of preparedness. The Seven Step Survival Plan supplies some basic guidelines to help keep your plan in balance and ensures you're not missing any critical segments of a well-adjusted survival strategy.

Economic Security

Scientific evidence shows that most glaciers in South Asia's Hindu Kush Himalayan region are retreating, but the consequences for the region's water supply are unclear, this report finds. The Hindu Kush Himalayan region is the location of several of Asia's great river systems, which provide water for

Access Free Retreat Security And Small Unit Tactics

drinking, irrigation, and other uses for about 1.5 billion people. Recent studies show that at lower elevations, glacial retreat is unlikely to cause significant changes in water availability over the next several decades, but other factors, including groundwater depletion and increasing human water use, could have a greater impact. Higher elevation areas could experience altered water flow in some river basins if current rates of glacial retreat continue, but shifts in the location, intensity, and variability of rain and snow due to climate change will likely have a greater impact on regional water supplies.

Himalayan Glaciers: Climate Change, Water Resources, and Water Security makes recommendations and sets guidelines for the future of climate change and water security in the Himalayan Region. This report emphasizes that social changes, such as changing patterns of water use and water management decisions, are likely to have at least as much of an impact on water demand as environmental factors do on water supply. Water scarcity will likely affect the rural and urban poor most severely, as these groups have the least capacity to move to new locations as needed. It is predicted that the region will become increasingly urbanized as cities expand to absorb migrants in search of economic opportunities. As living standards and populations rise, water use will likely increase—for example, as more people have diets rich in meat, more water will be needed for agricultural use. The effects of future climate change could further exacerbate water stress.

Himalayan Glaciers: Climate Change, Water Resources, and Water Security explains that changes in the availability of water resources could play an increasing role in political tensions, especially if existing water management institutions do not better account for the social, economic, and ecological complexities of the region. To effectively respond to the effects of climate change, water management systems will need to take into account the social, economic, and ecological complexities of the region. This means it will be important to expand research and monitoring programs to gather more detailed, consistent, and accurate data on demographics, water supply, demand,

and scarcity.

The Retreat of the State

In a groundbreaking, comprehensive history of the Army of Northern Virginia's retreat from Gettysburg in July 1863, Kent Masterson Brown draws on previously untapped sources to chronicle the massive

effort of General Robert E. Lee and his command as they sought to move people, equipment, and scavenged supplies through hostile territory and plan the army's next moves. Brown reveals that even though the battle of Gettysburg was a defeat for the Army of Northern Virginia, Lee's successful retreat maintained the balance of power in the eastern theater and left his army with enough forage, stores, and fresh meat to ensure its continued existence as an effective force.

Farewell the Trumpets: An Imperial Retreat traces the momentous decline and fall of the greatest of empires - from Queen Victoria's Diamond Jubilee to the death of Winston Churchill in 1965. With characteristic balance, this masterpiece of narrative history describes the long retreat and final dissolution of the British Empire. The Pax Britannica Trilogy includes Heaven's Command: An Imperial Progress and Pax Britannica: The Climax of an Empire. Together these three works of history trace the dramatic rise and fall of the British Empire, from the accession of Queen Victoria in 1837 to the death of Winston Churchill in 1965. Jan Morris is also world-renowned for her collection of travel writing and reportage, spanning over five decades and including such titles as Venice, Coronation Everest, Hong Kong, Spain, A Writer's World and most recently, Contact! 'The British Empire is fortunate in having found in Morris a chronicler and memorialist who can do it justice. . . Morris writes with inspired gusto, firmly rooted in erudition, which carries the book into the realms of literature.' Sunday Telegraph 'One of our finest writers on Empire - alive to its glory, yet with a beady eye for the corruptions and failures which were at its heart, along with the dreams.' Observer

"Military Operations in Urban Terrain (MOUT) create unique cognitive demands for small unit leaders, particularly platoon leaders. Years of experience are typically needed to master these demands.

Access Free Retreat Security And Small Unit Tactics

However, most platoon leaders tend to have limited experience in Army operations generally, and MOUT operations specifically. A cognitive task analysis, based on in depth interviews with subject matter experts (n=7), was conducted to expose the cognitive aspects of expertise existing within one important MOUT task, building clearing operations. From the perspective of platoon leaders, the cognitive demands of this task were defined within the context of decision requirement tables. Decision requirements detail critical decisions and judgments, the reasons why they can be difficult to make, cues and factors that influence decision making, and rules and strategies employed in the decision making process. The findings of the cognitive task analysis guided the development of training recommendations, particularly the need for a scenario based MOUT training program aimed at improving platoon leader expertise through practice in decision making."--Stinet.

The history of the American Ranger is a long and colorful saga of courage, daring, and outstanding leadership. It is a story of men whose skills in the art of fighting have seldom been surpassed. The United States Army Rangers are an elite military formation that has existed, in some form or another, since the American Revolution. A group of highly-trained and well-organized soldiers, US Army Rangers must be prepared to handle any number of dangerous, life-threatening situations at a moment's notice-and they must do so calmly and decisively. This is their handbook. Packed with down-to-earth, practical information, The Ranger Handbook contains chapters on Ranger leadership, battle drills, survival, and first aid, as well as sections on military mountaineering, aviation, waterborne missions, demolition, reconnaissance and communications. Did Confederate armies attack too often for their own good during the Civil War? Was the relentless, sometimes costly effort to preserve territory a blunder? These questions about Confederate strategy have dogged historians since Appomattox. Many have come to believe that the South might have won the Civil War if it had only avoided head-on battles, conducted an aggressive guerrilla campaign, and manoeuvred across wide swaths of territory. This volume offers a consideration of this widely-held theory.

A thought-provoking, chilling, and eerily prescient look at “prepper” communities around the world that are building bunkers against a possible apocalypse. Currently, 3.7 million Americans call themselves preppers. Millions more prep without knowing it. Bradley Garrett, who began writing this book years before the 2020 Covid-19 pandemic, argues that prepping is a rational response to global, social, and political systems that are failing to produce credible narratives of continued stability. Left with a sense of foreboding fueled by disease outbreaks, increasing government dysfunctionality, eroding critical infrastructure, nuclear brinksmanship, and an accelerating climate crisis, people all over the world are responding predictably—by hunkering down. For this book, Garrett traveled across four continents to meet those who are constructing panic rooms, building underground backyard survival chambers, stockpiling supplies, preparing go bags, hiding inflatable rafts, rigging mobile “bugout” vehicles, and burrowing deep into the earth. He has returned with a brilliant, original and never less than deeply disturbing story from the frontlines of the way we live now: an illuminating reflection on our age of disquiet and dread that brings our times into new and sharper focus. The “bunker,” Garrett shows, is all around us: in malls, airports, gated communities, the vehicles we drive. Most of all, he reveals, it’s in
