Special Forces Survival Guide

"For people who want to develop their bushcraft skills and survive outdoors, this book provides information for treating injuries and illness while in the wild. It includes tips and information on how to use typical outdoorsman items in case of a medical emergency or survival situation"--

Survival Hacks

I've written this book to help you – the soldier – kill the enemy when you get the chance and, most importantly, come back home in one piece. To achieve this aim I've covered combat training from boot camp up to the level required of a Special Forces soldier. And then gone on to add a few tricks of my own. I've done a bit of soldiering (Northern Ireland, SAS deployments, Bush Wars in Africa, life as a merc) and been in my fair share of fire-fights. I've only been wounded twice and learnt from both occasions. I'm going to use my experience to teach you to play the game. I'm not going to teach you how to survive in snowy mountains for a month with only one tea-bag or how to kill a room full of people

with only a toothpick. There are plenty of books that do that already. This book will teach you how to fight and survive war in the 21st century from the tools of the trade, to avoiding getting shot or blown-up, from surviving an interrogation to defending a position. This is a book not for the faint hearted. But then neither is war.

Gold of the Gods

John “Lofty” Wiseman is the author of the bestselling SAS Survival Handbook, the definitive guide to survival in the wild from Britain’s Special Air Service. Now he has compiled the complete guide to surviving among crowds of people, the mazes of office buildings, the dangers of an unfeeling city—put simply, how to stay safe in the urban jungle. Thousands of preventable fatalities occur in the home every year— more than on the roads, more than in the great outdoors. Household chemicals, electricity, cooking knives, and rodent poisons—in the wrong hands and with improper usage, these day-to-day resources bring danger to your home. Add to this the risks of moving through city streets (the threat of rape, muggings, and gang violence) and the menace of natural disasters (floods, earthquakes, blizzards) that cannot be avoided. Every day serves as a constant reminder: The world is truly a frightening place. The SAS Urban Survival Guide advises readers to think practically about urban environments and offers tips and instructions on how to avoid hazards wherever one goes. From self-defense techniques to home security systems to coping with natural disasters, this book teaches readers to recognize danger, make quick decisions, and live confidently in the modern world.

The Survival Handbook

Containing the tips and information you need to be able to survive outdoors, this book includes information on such things as what to pack in your survival kit, first aid, dealing with inclement weather, and learning to recognise animal tracks.

Outdoor Survival

Anyone who has spent any time outdoors has come across strange tracks and wondered, “What was here?” In this new and revised edition of *The SAS Guide to Tracking*, a veteran of Britain's elite Special Air Service shows how to track any moving thing, in any environment, and under nearly any circumstance. An essential handbook for developing a new awareness of the outdoors, this book is the perfect companion for naturalists, outdoorspeople, hunters, wildlife photographers, search-and-rescue teams, and law enforcement organizations. Included are tips on: Tracking in desert, forest, jungle, marsh, and grassy areas Interpreting animal, human, and vehicle signs Preserving night vision Using time frames to eliminate misleading signs Detecting quarry when they backtrack or circle around Interpreting how time and weather affect signs Spotting intentionally misleading signs With a Foreword by John “Lofty” Wiseman, author of *The SAS Survival Handbook*

Camping & Wilderness Survival

With the aid of superb line artworks, 'Special Forces Wilderness Survival Guide' demonstrates the core skills that the world's elite forces practice to survive in a wilderness environment.

Wilderness Survival

Anyone venturing into the desert, either by crossing on foot, vehicle, or in an aircraft (other than a commercial flight) should be prepared. Desert regions are those least likely to have an easily available source of water. Nevertheless, the survivor must find a water supply or they will die. No matter how abundant the rest of your survival resources are, without water your time is limited. To travel or stay put is one of the great dilemmas any survivor must face. The factors governing any decision should be based

on where you are, your chances of survival if you stay put, where you intend moving to and the related hazards in getting there. Without communications it is difficult to assess whether there will be a rescue attempt, and even if there is, it would be presumptive to believe that they will locate you. Additionally, having the physical and mental ability, plus the resources to travel and reach a given point accurately is also a major factor. The SAS Guide to Desert Survival prepares the traveler for any situation they may find themselves in while venturing across desert and arid areas. It will explain the need for an immediate plan, as time will be against you, as well as how to dress for the ultimate protection from the sun and the cold (yes, deserts get very cold at night). The book will show you how and when to travel, as well as how to navigate a route to safety. The desert has two main advantages: the sun and the general clearness of visibility; a simple heliograph will flash a signal to both ground and air rescue services up to twenty-five miles away.

For those who have been accustomed to reading books on wilderness skills that entertain but fall short of actually teaching you "how to" accomplish the tasks and skills at hand, this book is a pleasant surprise - written for those who wish to actually head into the wilderness and practice the skills of our ancestors. Primitive Wilderness Living and Survival Skills is a compilation of ten booklets written over the course of seven years each chapter a complete, concise "how-to" in itself. Unlike many who have written on this subject in the past, John and Geri McPherson have spent years daily practicing these skills, perfecting methods through trial and error - and documenting it. This vast knowledge is passed on to the reader. Illustrated with over 700 photographs crammed into 400 pages, this massive work is not a rehashing and perpetuation of myths. These are tried and true methods of primitive wilderness living and survival skills. Field and Stream says: "The McPherson's book deals with taking flat nothing into boondocks and staying for a long period of time. If you'd like to know how to make a spear thrower, or pottery, or brain cure deer hides, or build a permanent shelter from what you find at and, here is the place to learn." If you breathe and have a pulse, you NEED this book. -Cody Lundin Cody Lundin, director of the Aboriginal Living Skills School in Prescott, Arizona, shares his own brand of wilderness wisdom in this highly anticipated new book on commonsense, modern survival skills for the backcountry, the backyard, or the highway. It is the ultimate book on how to stay alive-based on the principal of keeping the body's

core temperature at a lively 98.6 degrees. In his entertaining and informative style, Cody stresses that a human can live without food for weeks, and without water for about three days or so. But if the body's core temperature dips much below or above the 98.6 degree mark, a person can literally die within hours. It is a concept that many don't take seriously or even consider, but knowing what to do to maintain a safe core temperature when lost in a blizzard or in the desert could save your life. Lundin delivers the message with wit, rebellious humor, and plenty of backcountry expertise. Cody Lundin and his Aboriginal Living Skills School have been featured in dozens of national and international media sources, including Dateline NBC, CBS News, USA Today, The Donny and Marie Show, and CBC Radio One in Canada, as well as on the cover of Backpacker magazine. When not teaching for his own school, he is an adjunct faculty member at Yavapai College and a faculty member at the Ecosa Institute. Cody is the only person in Arizona licensed to catch fish with his hands, and lives in a passive solar earth home sixty miles from Prescott, Arizona.

Sas Encyclopedia of Survival

Tracking originated with man's need for food; he needed to understand what he was following and what the rewards would be if he was successful. Little has changed over time about the terms of tracking. We still track game for sport and food, but we have also found other uses for tracking. Border police patrol to stop illegal immigrants from entering their country; the military tracks down wanted terrorists or enemy forces. Tracking has become a military skill. In the SAS Tracking Handbook, former SAS soldier and British Empire Medal (BEM) award-winner Barry Davies teaches not only how to survive in the outdoors with the skills of tracking, but how to use these skills from a military standpoint. Included in this book are many helpful tips on topics including: The types of dogs used for tracking. Traps for catching wild animals. Modern military tracking. Using your surroundings to your advantage. And much more. The success or failure of the modern tracker is dependent on the personal skills of the individual tracker. Training is vital in learning tracking skills, and continuous exercise the best way to interpret signs. These skills are rarely found, but they remain hidden deep within all of us. So whether you're already a skilled tracker or a novice in the field, the SAS Tracking Handbook will be your guide to mastering this old and respected art.

SAS Mountain and Arctic Survival

When we think of jungles, we often think of a densely forested area with thick foliage; this is what is known as a primary jungle. But jungles can also include swamps, grasslands, and cultivated areas. Primary jungles can fall into the category of either a tropical rain forest or a deciduous forest, depending on the types of trees and plants found growing there. A tropical rain forest is typified by having tall trees whose upper branches interlock to form canopies. Yet of all the environments in which man has to survive, the jungle offers the best chance. The SAS have operated in the jungle for years, sometimes staying in the forest for months at a time. They developed a technique whereby they had two sets of clothing, one for daytime use and one for night. Just before they went to sleep they would change from their wet clothing, which was normally hung under the shelter to dry out. In the morning they would change from their dry clothing and put on the wet. It is an uncomfortable change, but one that guaranteed a good night's sleep in dry clothing. The SAS Guide to Jungle Survival will teach the reader to come to terms with the jungle environment, understand it, and work with it as opposed to "fighting it." The jungle forest can provide shelter, food, and water in abundance, and this book will show you how. If the jungle offers any problems, it is with disease and wild animals; The SAS Guide to Jungle Survival will show you how to avoid and resist both and come out alive.

SAS Ultimate Guide to Combat

It is difficult to imagine how anyone would enter into a polar or mountainous region unprepared. You're prepared for your journey or you arrive by accident; for example, the aircraft you are traveling in has crash-landed over the frozen tundra, or your mode of transport has broken down in the wilderness. In all cases, providing you are uninjured, your chances of survival are good. Planned travel in a cold or mountainous environment should mean that you are well clothed and equipped. In both winter and summer, the Northern Arctic offers an abundant supply of water and food; shelter can be found or constructed above and below the tree line. The real threat comes from the cold, injury, and simply doing nothing. During the Second World War a number of service men became marooned in the arctic wasteland—most of them died. They did so because few ventured far from their crash site, they made no attempt to catch fish, hunt game, or even attempt to travel south. None that were later found had prepared a rescue signal, and most had died not from the cold but from starvation. *The SAS Guide to Arctic and Mountain Survival* provides details on what to do immediately after your arctic or mountain survival situation has arisen. You will learn how to prepare a shelter, especially on a barren landscape.
