Heart disease and erectile function - Harvard Health

The problem with erectile dysfunction is that it can be a vicious cycle – you suffer with problems getting an erection, so you avoid sex because you're worried it'll happen again. But in fact that's the worst thing you can do, because regularly getting aroused will actually improve blood flow to your penis making it easier to get erections and making those erections stronger too.

Erectile Dysfunction & Food: How Diet Effects Sexual Health

Problems getting or keeping an erection may be a red flag for heart trouble down the road, and many men with heart disease have sexual concerns they aren't talking about. The connection between heart disease and erection problems (doctors call it erectile dysfunction) isn't far-fetched at all.

Senior sex: Tips for older men - Mayo Clinic

You need proper blood flow in order to fill your penis with blood and create a hard erection. This blood flow to the penis starts with a healthy heart and vessels. Heart disease, high blood pressure, high cholesterol, and clogged arteries all restrict blood flow and damage nerves. This means the blood can't get to the penis and create an erection.

In most cases, sexual problems are caused by the heart or circulatory condition itself. Or by worries and anxieties relating to it. It is common to experience impotence or erectile dysfunction (inability to achieve or maintain an erection). This can sometimes be a side effect of your medication. Do you have a heart or circulatory condition?

Understanding and Overcoming Erectile Dysfunction

In 43,000 men who had suffered a first heart attack, the use of any erectile dysfunction drugs was observed to reduce the risk of dying of any cause by 33% during the course of the three-year study. That's a big advantage for the survivor of a heart attack. It's also gratifying to know the safety of sex in general and these drugs, in particular.
