These questions and others are thoughtfully probed in this collection of essays, which features articles from theologians, philosophers, physicians, biomedical ethicists, and an attorney.

## **Human Embryo Adoption**

Based on Dr. Wright's classic major reference, Handbook of Pediatric Strabismus and Amblyopia outlines the latest findings in diagnosing the most commonly presenting problems in pediatric cases, offering the most complete assessment tools for accurate diagnosis and then best treatment options. Distilling the essentials of these prevalent and sometimes complicated cases into a portable, complete and authoritative pocket reference, this handbook offers a complete picture of how to

best treat pediatric patients. Specifically, the introductory chapters on the specifics of pediatric ophthalmology (embryology, post-natal development and the pediatric exam) will help newcomers to pediatric practice fully grasp the subtle differences in pediatric care. The chapters are written by leading experts in the field and are presented in a user-friendly format, relying on heavily illustrated in color plates, clinically helpful tables, charts, and decision-making guidelines. This approach will enable the practitioner (whether specialist or generalist) to make the most accurate diagnosis and choose the most effective treatment option.

### **Human Fertilisation and Embryology**

The versatility of oocyte and embryo donation has proven to be extremely valuable to both patients and doctors engaged in reproductive medicine. Originally thought to be applicable only to a rather small subset of infertile women, today busy practices commonly recommend the procedure and it is estimated that nearly all of the 400 or more IVF programs in the United States provide these services. Oocyte and embryo donation has established itself as a mainstay procedure within assisted reproductive care, and the breadth, depth and complexity of practice is deserving of focused attention. Much has

changed within the field of oocyte and embryo donation since the publication of the first edition of Principles of Oocyte and Embryo Donation in 1998, thus the need for a completely updated and more expansive text. The second edition of this book provides an overview of the major issues affecting men and women engaged in the practice of oocyte and embryo donation. A primary emphasis has been placed on defining the standards of practice that have evolved over the past 30 years, clearly stating the outcomes expected from adhering to these established protocols. Details of both the basic science and the clinical medicine are presented together and attention is also focused on the non-reproductive aspects inherent to this unique method of assisted reproduction that involves opinions from lawyers, ethicists, mental health care professionals and theologians. Oocyte and embryo donation requires a working knowledge of the medicine, the law and the ethics that underlies its foundation. This book is intended to serve as a complete and comprehensive reference for all health care professionals that provide services related to egg donation, reproductive endocrinologists, obstetrician- gynecologists, and fellows and residents entering the fertility field.

Applies church teaching as it relates to biomedical technology.

### **The Elusive Embryo**

The strength of this collection of essays is its careful consideration, from a variety of perspectives within the Catholic tradition, of the practice of embryo adoption. It approaches the question in an open and reasonable way by allowing proponents of diverse positions within the tradition. This method both sheds a great deal of light on the particular question and at the same time introduces the reader to the relevant general principles that guide Catholic moral thought.

### **What to Do with the Least of Our Brothers?**

This work examines the industry of reproductive technology from the perspective of the consumer. An analysis is made of the array of medical options available to those with fertility problems, and the financial and emotional toll is assessed.

### **From Chance to Choice**

## **Embryo Politics**

Dealing with such issues as globalization, gender and AIDS, these essays by moral theologians demonstrate the creativity, dynamism and diversity of the Catholic moral tradition as it proceeds from local cultures, opens itself to cross-cultural conversations, and progresses in a spirit of mercy and care.

## **Contemporary Bioethics**

It seems at times unthinkable that a book like this would have to be written, although, I am relatively sure that Aldous Huxley foresaw its necessity, when he wrote Brave New World. But, the time has arrived where babies are manufactured in sterile facilities and tested for their fitness for life in the world. While we have not yet advanced sufficiently in biological sciences to entirely forego natural gestation in favor of prenatal programming process which Huxley describes, we have reached the point where those unwanted embryos are: set aside; freeze dried; and abandoned or destroyed when they do not meet the standard set for a child. This book affirms the intrinsic

goodness of the life of each embryo and explores from the Catholic perspective the possibility of frozen embryo rescue by adoption. It looks at those arguments, which see the elements of in vitro fertilization as so contrary to the faith and the natural law as to be irrecoverably intrinsically evil, and rejects those in favor of a small and narrow path of adoption to fully re-incorporate a child, through the love of a mother and a father, into the society which abandoned it.

## **Classic Cases in Medical Ethics**

What may we say about the significance of particular moral actions for one's relationship with God? In this provocative analysis of contemporary Catholic moral theology Darlene Fozard Weaver shows the person as a moral agent acting in relation to God. Using an overarching theological context of sinful estrangement from and gracious reconciliation in God, Weaver shows how individuals negotiate their relationships with God in and through their involvement with others and the world. Much of current Christian ethics focuses more on persons and their virtues and vices exemplified by the work of virtue ethicists or on sinful social structures illustrated in the work of liberation theologians. These judgments fail to appreciate the

reflexive character of human action and neglect the way our actions negotiate our response to God. Weaver develops a theologically robust moral anthropology that advances Christian understanding of persons and moral actions and contends we can better understand the theological import of moral actions by seeing ourselves as creatures who live, move, and have our being in God.

## **A Snowflake Named Hannah**

Focusing on developmental and clinical issues in children's adjustment to adoption, the authors introduce this volume with an overview of historical and contemporary perspectives, then explore various theories that have addressed the issue of psychological risk associated with adoption. Following a review of empirical research on factors that influence the adjustment process, the authors discuss different types of adoption, analyze methodological problems, and discuss clinical and assessment issues that commonly arise in work with adoptees and their families.

## Book 95

This book, written by four internationally renowned bioethicists and first published in 2000, was the first systematic treatment of the fundamental ethical issues underlying the application of genetic technologies to human beings. Probing the implications of the remarkable advances in genetics, the authors ask how should these affect our understanding of distributive justice, equality of opportunity, the rights and obligations as parents, the meaning of disability, and the role of the concept of human nature in ethical theory and practice. The book offers a historical context to contemporary debate over the use of these technologies by examining the eugenics movement of the late nineteenth and early twentieth centuries. The questions raised in this book will be of interest to any reflective reader concerned about science and society and the rapid development of biotechnology, as well as to professionals in such areas as philosophy, bioethics, medical ethics, health management, law, and political science.

Discussions and debates over the medical use of stem cells and cloning have always had a religious component. But there are many different religious voices. This anthology on how religious perspectives can

# Free Copy The Ethics Of Embryo Adoption And The Catholic Tradition Moral Arguments Economic Reality And Social Analysis Philosophy And Medicine Book 95

inform the difficult issues of stem cell research and human cloning is essential to the discussion. Contributors reflect the spectrum of Christian responses, from liberal Protestant to evangelical to Roman Catholic. The noted moral philosopher, Laurie Zoloth, offers a Jewish approach to cloning, and Sondra Wheeler contributes her perspective on both Jewish and Christian understandings of embryonic stem cell research. In addition to the discussions found here, *God and the Embryo* includes a series of official statements on stem cell research and cloning from religious bodies, including the Roman Catholic Church, the Orthodox Church in America, the United Methodist Church, the Southern Baptist Convention, the United Church of Christ, the Presbyterian Church (USA), and the Union of Orthodox Jewish Congregations of America and the Rabbinical Council of America. "Human Cloning and Human Dignity: An Ethical Inquiry," from the statement of the President's Council on Bioethics, concludes the book. The debates and the discussions will continue, but for anyone interested in the nuances of religious perspectives that make their important contributions to these ethically challenging and important dialectics, *God and the Embryo* is an invaluable resource.

Since accidentally discovering the ability of glycerol on protecting cells from freezing damage, many researchers have been pursuing to develop cryopreservation methods of a very wide range of cells and some tissues, and these have found widespread applications in biology and medicine. From the point of view of living organisms, cryopreservation is a useful tool for ex situ conservation of genetic resources together with its contribution on conservation of their biodiversity. Cryopreservation in Eukaryotes includes totally 12 chapters, which have been written by the expert researchers in the field. The chapters are a comprehensive collection of the most frequently used methods for eukaryotes. With this book, every researcher will better understand the principles, background, and current status of cryopreservation in particular organisms.

### **Applied Ethics in a World Church**

This book discusses the ethical dilemmas relating to the use of frozen human embryos. During an IVF process, after fertilization of the eggs, the embryos that are not needed immediately can be placed in the freezer to be preserved for future use. Regarding the fate of frozen human embryos, the possibilities include: i) donating them for stem cell research or for treatment of disease; ii) using them as a means

## Book 95

for treatment of infertility; iii) permitting their destruction; iv) allowing them to thaw and die; v) allowing them to continue to stay in the freezer and vi) utilizing them in a form of prenatal adoption. As the book reveals, it is only the proposal to adopt the embryos that can be considered in terms of moral permissibility because the rest do not respect and protect the dignity, integrity and life of the human embryo. The book focuses on the proposal for prenatal adoption. The anthropological dimension of adoption reveals that the ethics of adoption is based on gift and acceptance and that adoption is a concrete manner of expressing love and solidarity. Thus, an abandoned child is received with love to be permanently a member of the adoptive family. The husband and wife who did not beget the abandoned child, generate him/her through the intrinsic generative power of their love. With this, it was demonstrated in this book that prenatal adoption is compatible with the dynamic of adoption. Prenatal adoption as *Dignitas personae* reveals is praiseworthy because it protects and saves human lives, but it presents various problems. Based on the declarations of the Catholic Magisterium, there is a prolific Catholic debate on the morality of prenatal adoption. Some agree it is morally permissible, while others disagree. Most arguments in the Catholic debate are centred on whether prenatal adoption separates the unitive and procreative meanings of marriage. This book proposes a reconsideration

of prenatal adoption, sticking strictly to the Magisterial prudential judgement.

### **Safe Abortion**

When John and Marlene Strege learned they wouldn't be able to have a child, they were devastated. Then Marlene asked the question that would change their lives: Can frozen embryos be adopted? The answer not only gave them their beloved daughter Hannah, it drew all three into a political spotlight they never expected.

Hundreds of thousands of frozen embryos exist, held in stasis because parents using in vitro fertilization have completed their families without them. When scientists discovered a way to extract stem cells from human embryos for disease research and cures, those tiny lives were suddenly at risk. And Hannah, just a few months after this discovery, became the first human face of the growing resistance to this new science. In the first few years of her life, she not only sparked other parents to adopt their own "snowflake babies," but she also inspired the first frozen embryo adoption program, featured on Focus on the Family (getting a new godfather in Dr. Dobson), attended her mother's testimony in Congress, and stood at President Bush's side

as he vetoed federal funding for embryonic stem cell research.

This compelling story unfolds at the intersection of faith and family, science and politics. Pro-life Christians, those who have experienced infertility or know those who have, and anyone concerned with where science can lead when moral and ethical concerns are ignored will welcome this book--and the sweet face of the baby who might never have been born.

## **Mitochondrial Replacement Techniques**

Pluripotent stem cells have the potential to revolutionize treatment options for a range of diseases and conditions. This book presents recent advances in our understanding of the biological mechanisms of stem cell self-renewal, reprogramming and regeneration. Also covered are novel methodological advances in the culture, purification and use of stem cells, as well as the ethical and moral dilemmas of embryo donation and adoption. These advances will shape the utilization of stem cells for future basic and applied applications.

Assisted reproductive technology (ART) allows people who are infertile

the opportunity to conceive children and form much desired families. Over the past few decades, the number of ART procedures conducted in the United States has steadily increased, in part affected by the growing number of women trying to conceive later in their reproductive lives. This demographic shift in baby making has widened to include a variety of other people who experience social infertility, from single persons to same-sex couples. Media exposure and political attention to the use of ART have aroused public concern and controversy. In *Assisted Reproduction*, Alexandra E. Sigillo and Monica K. Miller explore how media, personal differences, societal influences, and psychological processes shape community sentiment toward ART and ART-related laws and policies. This book is recommended for students and scholars of psychology, sociology, gender and women's studies, communication studies, public health, and legal studies.

beginning of life issues: (1) persons are those beings capable of higher-order cognition, or self-consciousness, and (2) it is impermissible to kill only persons. As a consequence, a consensus is reached regarding the permissibility of both destroying human embryos for research purposes and abortion. The present collection aims to interact critically with this consensus. Authors address various aspects of this 'orthodoxy'. Issues discussed include: theories of personhood and in particular the role of thought experiments used in support of such theories; the notion of an intrinsic potential and the moral relevance of having one; new formulations of the virtue argument against abortion rights; four-dimensionalism and abortion; the notion of moral status and who (or what) has it; scientific accounts of what a human being is, as well as addressing empirical evidence of fetal consciousness; and analysis of the public policy implications given the epistemic status of pro-choice arguments. Given the issues discussed and that the arguments in critical focus are fairly new, the collection provides a novel, comprehensive, and rigorous analysis of contemporary pro-choice arguments."

derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice - the maqa' sid - which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

## **Cryopreservation in Eukaryotes**

Since the first fertilization of a human egg in the laboratory in 1968, scientific and technological breakthroughs have raised ethical dilemmas and generated policy controversies on both sides of the Atlantic. Embryo, stem cell, and cloning research have provoked impassioned political debate about their religious, moral, legal, and practical implications. National governments make rules that govern the creation, destruction, and use of embryos in the laboratory—but they do so in profoundly different ways. In *Embryo Politics*, Thomas Banchoff provides a comprehensive overview of political struggles about embryo research during four decades in four countries—the United States, the United Kingdom, Germany, and France. Banchoff's book, the first of its kind, demonstrates the impact of particular national histories and institutions on very different patterns of national governance. Over time, he argues, partisan debate and religious-secular polarization have come to overshadow ethical reflection and political deliberation on the moral status of the embryo and the promise of biomedical research. Only by recovering a robust and public ethical debate will we be able to govern revolutionary life-science

Mitochondrial replacement techniques (MRTs) are designed to prevent the transmission of mitochondrial DNA (mtDNA) diseases from mother to child. While MRTs, if effective, could satisfy a desire of women seeking to have a genetically related child without the risk of passing on mtDNA disease, the technique raises significant ethical and social issues. It would create offspring who have genetic material from two women, something never sanctioned in humans, and would create mitochondrial changes that could be heritable (in female offspring), and therefore passed on in perpetuity. The manipulation would be performed on eggs or embryos, would affect every cell of the resulting individual, and once carried out this genetic manipulation is not reversible. Mitochondrial Replacement Techniques considers the implications of manipulating mitochondrial content both in children born to women as a result of participating in these studies and in descendants of any female offspring. This study examines the ethical and social issues related to MRTs, outlines principles that would provide a framework and foundation for oversight of MRTs, and develops recommendations to inform the Food and Drug Administration's consideration of investigational new drug applications.

Since 1998, the volume of research being conducted using human embryonic stem (hES) cells has expanded primarily using private funds because of restrictions on the use of federal funds for such research. Given limited federal involvement, privately funded hES cell research has thus far been carried out under a patchwork of existing regulations, many of which were not designed with this research specifically in mind. In addition, hES cell research touches on many ethical, legal, scientific, and policy issues that are of concern to the public. This report provides guidelines for the conduct of hES cell research to address both ethical and scientific concerns. The guidelines are intended to enhance the integrity of privately funded hES cell research by encouraging responsible practices in the conduct of that research.

Questions about the dignity of the human person give rise to many of the most central and hotly disputed topics in bioethics. In *A Defense of Dignity: Creating Life, Destroying Life, and Protecting the Rights of Conscience*, Christopher Kaczor investigates whether each human being has intrinsic dignity and whether the very concept of "dignity" has a useful place in contemporary ethical debates. Kaczor explores a

# Free Copy The Ethics Of Embryo Adoption And The Catholic Tradition Moral Arguments Economic Reality And Social Analysis Philosophy And Medicine Book 95

broad range of issues addressed in contemporary bioethics, including whether there is a duty of "procreative beneficence," the ethics of ectopic pregnancy, and the possibility of "rescuing" human embryos with human wombs or artificial wombs. A Defense of Dignity also treats issues relevant to the end of life, including physician-assisted suicide, provision of food and water to patients in a persistent vegetative state, and how to proceed with organ donation following death. Finally, what are the duties and prerogatives of health care professionals who refuse in conscience to take part in activities that they regard as degrading to human dignity? Should they be forced to do what they consider to be violations of the patient's well being, or does patient autonomy always trump the conscience of a health care professional? Grounded in the Catholic intellectual and moral tradition, A Defense of Dignity argues that all human beings from the beginning to the end of their lives should be treated with respect and considers how this belief should be applied in controversial cases. "A Defense of Dignity provides a skillful, informed, and clear philosophical analysis, from a natural law perspective, of a range of controversial, and sometimes complex, bioethical questions concerning the beginning and end of life. Few authors approach bioethics from a natural law perspective, and few do it as well as Christopher Kaczor. The book should be of interest not only to natural law philosophers

and their students, but also to anyone interested in bioethics." –John Keown, Georgetown University "Moral questions at the beginning and ending of life and controversies over liberty of conscience are among the most vexing and important issues of our day. Christopher Kaczor brings his characteristic moral seriousness and philosophical good sense to his treatment of these issues, all of which implicate the key concept of human dignity. This eminently readable collection will provide an invaluable resource for educators and students alike." –Christopher Tollefsen, University of South Carolina "Indispensable. Kaczor untangles the various meanings of human dignity to undertake a reexamination of the most serious and difficult issues in medical ethics. The book combines clarity with philosophical precision, faithfulness to Catholic teaching with a thorough engagement with critics." –J. Budziszewski, University of Texas at Austin
