The Fertility Factor (Manhattan Multiples, Book 2): Amazon

Numerous studies have confirmed a role for select nutrients in maintaining male-factor fertility, including alpha-lipoic acid, beta-carotene, cobalamin, selenium, zinc, and vitamins A, C, D, and E, among others [47-50]. Given these associations, as well as those previously discussed linking diet to infertility, many have suggested a potential role for multivitamin supplementation in optimizing male fertility.

The Fertility Factor Manhattan Multiples: Jennifer Mikels

Fertility factors are determinants of the number of children that an individual is likely to have. Fertility factors are mostly positive or negative correlations without certain causations. Factors generally associated with increased fertility include the intention to have children, in advanced societies: very high gender equality, religiosity, inter-generational transmission of values, marriage and war, maternal and social support, rural residence, pro family government programs, low IQ. and in
