Determinants of Fertility in Developing Countries: Supply and demand for children

The history of Asian immigrants in Canada is more than a century old, and the number of persons of Asian descent has more than doubled over the past fifteen years, yet until now there has been no systematic study of these Asian-born Canadians. Using specifically obtained demographic data from Statistics Canada, Shiva S. Halli has investigated differences in family size among Asian ethnic groups in Canada in order to examine inter-group differences and to pinpoint causes for such variations. The author examines the context of fertility differentials by looking at social, cultural, and historical backgrounds, and attempts to utilize the minority status hypothesis, which was originally applied to ethnic groups in the United States, to explain differences in Asian ethnic fertility in Canada.

The Role of Family Planning Programs in Contemporary Fertility Transitions

Social Dynamics of Adolescent Fertility in Sub- Saharan Africa

Handbook of Fertility: Nutrition, Diet, Lifestyle and Reproductive Health focuses on the ways in which food, dietary supplements, and toxic agents, including alcohol and nicotine affect the reproductive health of both women and men. Researchers in nutrition, diet, epidemiology, and endocrinology will find this comprehensive resource invaluable in their long-term goal of understanding and improving reproductive health. This book brings together a broad range of experts researching the different aspects of foods and dietary supplements that promote or detract from reproductive health. Section One contains several overview chapters on fertility, how it is assessed, and how it can be affected by different metabolic states, nutritional habits, dietary supplements, the action of antioxidants, and lifestyle choices. Sections Two and Three consider how male and female fertility are affected by obesity, metabolic syndrome, hormonal imbalance, and even bariatric surgery. Section Four explores the ways diet, nutrition, and lifestyle support or retard the success of in vitro fertilization, while Section Five explores how alcohol and other drugs of abuse lower fertility in both women and men. Explores how alcohol, nicotine, and other drugs of abuse disrupt and impair reproductive health Reviews studies of common conditions such as obesity and metabolic syndrome and their effect on fertility and reproductive health Investigates the components of foods and dietary supplements, in

particular oxidative stress and antioxidants Presents the nutritional effects of foods and dietary supplements and their benefits and risks relating to reproductive health

Family Planning Programmes and Fertility

Sustainability of agricultural systems is a major global concern due to population growth and a number of environmental factors. This book addresses the key to the development of sustainable agriculture-management of soil fertility. Combining data from temperate and tropical regions, it presents a complete picture of how various soils can best be managed under widely different environmental conditions. Soil Fertility Management for Sustainable Agriculture is an excellent reference for environmental and agricultural professionals as well as a textbook for undergraduate and graduate students preparing for a career in agriculture or soil fertility management.

Principles and Practice of Fertility Preservation

Advocating natural family planning, the author describes the development, use, and advantages of the ovulation method for preventing unwanted pregnancies

The Social Meaning of Children and Fertility Change in Europe

One in six couples around the world experience infertility. Before undertaking expensive and intrusive assisted reproductive treatment such as in vitro fertilization, many seek advice from their physicians or dietitians on what foods and supplements might enhance their fertility. But health practitioners are often ill equipped to provide dietary recommendations in a scientifically based manner.

Nutrition, Fertility, and Human Reproductive Function provides a comprehensive guide to clinicians on how they can best advise their patients to optimise fertility and reproductive function through optimal nutrition. Taking a holistic or "whole-of-life" approach, the book reviews the role of nutrition in human fertility and explores its effect on male and female reproductive physiology. Problem-orientated topics are arranged in chapters that each cover a specific clinical topic of interest, allowing easy reference by the practicing clinician. From the female perspective, the book covers the role of nutrition on essential reproductive processes such as ovulation, early embryo development, implantation, and sexual function, together with nutrition's influence on the duration of the reproductive life span. In the male context, it examines the effect of nutrition on hormone and sperm production as well as sexual function. The book also includes information on evidence-based complementary health approaches such as Traditional Chinese Medicine (TCM) and naturopathy. This book draws on the wide experience of several respected leaders in clinical nutrition who combine research expertise with clinical insight. The information contained herein will enable clinicians to make the best recommendations for their patients for optimising fertility.

The Personal Fertility Guide

The specialty of fertility preservation offers patients with cancer, who are rendered infertile by chemo- and radiotherapy, the opportunity to realize their reproductive potential. This gold-standard publication defines the specialty. The full range of techniques and scientific concepts is covered in detail, and the author team includes many of the world's leading experts in the field. The book opens with introductions to fertility preservation in both cancer and non-cancer patients, followed by cancer biology, epidemiology and treatment, and reproductive biology and

cryobiology. Subsequent sections cover fertility preservation strategies in males and females, including medical/surgical procedures, ART, cryopreservation and transplantation of both ovarian tissue and the whole ovary, and in-vitro follicle growth and maturation. Concluding chapters address future technologies, as well as ethical, legal and religious issues. Richly illustrated throughout, this is a key resource for all clinicians specializing in reproductive medicine, gynecology, oncology, hematology, endocrinology and infertility.

Handbook of Fertility

The countries of Asia, whose combined populations in 1990 totalled 3.1 billion (59 per cent of the world's total), have completed, or are in the midst of, a remarkable revolution in reproductive behaviour - a dramatic shift away from high and relatively uncontrolled child-bearing to a situation where most couples control their reproductive behaviour. This revolution has transcended political, social, economic, cultural, and religious boundaries, and its speed and momentum are historically unprecedented. Partly because of these factors, partly because Asian fertility is a key determinant of world population growth, and partly because the causes of the earlier Western fertility decline are still not fully understood, the Asian reproductive revolution is of great importance and interest to planners and social scientists. This book is the first major attempt to chart and explain the Asian fertility transition and to assess its implications. It begins by examining the relevance of current fertility transition hypotheses to the Asian context. It makes a comprehensive analysis of the evidence - including regional and ethnic variations within countries and comparisons of similar cultural groups in different countries - and challenges conventional theories of population change. It demonstrates how the transition has important implications for social, economic, and welfare

Read Free The Key To Fertility Is The Egg Find Out How The Scientific Knowledge Of Egg Quality Can Help You Cure Infertility Conceive Naturally Optimize Your Success At Iyf And Overcome Reproductive Issues

policies, and how Asian governments have responded so far. The book concludes by arguing that, based on the Asian experience, an adequate theory of demographic transition must include three separate elements; socio-economic change, the availability and legitimation of family planning, and the pressure exerted by government.

The Methods and Materials of Demography

The Revolution in Asian Fertility

Take Charge of Your Fertility Are you in your 30s and 40s and trying to conceive? Are you constantly being reminded that your clock is ticking? Well, you are in the right spot. Did you know a healthy diet can help enhance the quality of your eggs? That's right! It was once thought that egg quality could not be improved, that it was static and women have a limited number of eggs, and as they got older, the quality of the eggs got poorer. We know there's a truth to that, but there are things that can be done to improve the egg quality (and likewise sperm quality). When you buy this book, you'll learn the following: 1.How foods can optimize your health in getting your body ready for conception. 2.What exercises you can implement to boost your chances of conception. 3.Dietary strategies that can help boost your egg health (and sperm quality of your partner) and improve your chances of trying to conceive. 4.Know how the hormone AMH impacts fertility and how to increase AMH level with the appropriate diet if yours is low. 5.How blood sugar affects hormonal balance and its impact on egg quality. 6.The effect of sugar on fertility and practical strategies to help you cut out sugar to boost your egg health. 7.How acupuncture can help women with low egg reserve improve their egg quality and hormone levels. You'll find useful tips on how to boost your egg quality for

conception in your advanced maternal age; essential foods to include in your diet and those to avoid to promote egg quality. If you're suffering from PCOS, you'll find useful information on foods to take to help with weight loss to boost chances of conception and what to avoid. What are waiting for? Scroll up and get this book, so you don't miss out on a great way to improve your egg health and boost your fertility.

Fertility Rates and Population Decline

This report summarizes presentations and discussions at the Workshop on the Social Processes Underlying Fertility Change in Developing Countries, organized by the Committee on Population of the National Research Council (NRC) in Washington, D.C., January 29-30, 1998. Fourteen papers were presented at the workshop; they represented both theoretical and empirical perspectives and shed new light on the role that diffusion processes may play in fertility transition. These papers served as the basis for the discussion that is summarized in this report.

Linking soil fertility management to agricultural input and output market development

This publication is a product of the Fertility and Family Survey (FFS) project, which was conducted between 1988 and 1999 by the Population Activities Unit (PAU) of the United Nations Economic Commission for Europe (UNECE), with financial support from the United Nations Population Fund (UNFPA). The objectives of the project were: 1) to conduct comparable Fertility and Family Surveys in UNECE member countries; 2) to create and archive FFS Standard Recode Files (SRFs); 3) to prepare FFS Standard Country Reports (SCRs); 4) to carry out a program of cross-country comparative research. The FFS IWG organized an end-of-project

Read Free The Key To Fertility Is The Egg Find Out How The Scientific Knowledge Of Egg Quality Can Help You Cure Infertility Conceive Naturally Optimize Your Success At Inf And Overcome Breast Cancer

conference; the FFS Flagship Conference became an occasion for many researchers to present their findings of comparative analyses based on FFS data, in particular those studying partnership and fertility behavior. Volume one presents selected contributions to the FFS Flagship Conference solicited by the Organising Committee of the Conference. The second volume presents contributions received in response to a call for papers issued by the Organising Committee.

Nutrition, Fertility, and Human Reproductive Function

Analyzes how the possibility of egg freezing changes what it means to be fertile and to age in the 21st century Welcomed as liberation and dismissed as exploitation, egg freezing (oocyte cryopreservation) has rapidly become one of the most widely-discussed and influential new reproductive technologies of this century. In *Freezing Fertility*, Lucy van de Wiel takes us inside the world of fertility preservation—with its egg freezing parties, contested age limits, proactive anticipations and equity investments—and shows how the popularization of egg freezing has profound consequences for the way in which female fertility and reproductive aging are understood, commercialized and politicized. Beyond an individual reproductive choice for people who may want to have children later in life, *Freezing Fertility* explores how the rise of egg freezing also reveals broader cultural, political and economic negotiations about reproductive politics, gender inequities, age normativities and the financialization of healthcare. Van de Wiel investigates these issues by analyzing a wide range of sources—varying from sparkly online platforms to heart-breaking court cases and intimate autobiographical accounts—that are emblematic of each stage of the egg freezing procedure. By following the egg’s journey, *Freezing Fertility* examines how contemporary egg freezing practices both reflect broader social, regulatory and economic power asymmetries and repoliticize fertility and aging in ways that affect the public at large. In doing so, the book explores how the possibility of egg freezing shifts our relation to the beginning and end of life.

It Starts with the Egg

Selected papers from a seminar held in Tunis, June 26-30, 1989, sponsored by the Committee on Comparative Analysis of Fertility and Family Planning of the International Union for the Scientific Study of Population.

Rural Development and Human Fertility

A practical and evidence-backed approach for improving egg quality and fertility— fully revised and updated in 2019. The latest scientific research reveals that egg quality has a powerful impact on how long it takes to get pregnant and the risk of miscarriage. Poor egg quality is in fact the single most important cause of age-related infertility, recurrent miscarriage, and failed IVF cycles. Based on a vast array of scientific research, *It Starts with the Egg* provides a comprehensive program for improving egg quality in three months, with specific advice tailored to a variety of fertility challenges— including endometriosis, unexplained infertility, diminished ovarian reserve, PCOS, and recurrent miscarriage. With concrete strategies such as minimizing exposure to common toxins, choosing the right vitamins and supplements to safeguard developing eggs, and harnessing nutritional advice shown to boost IVF success rates, this book offers practical solutions that will help you get pregnant faster and deliver a healthy baby.

Soil Fertility in Malawi

It is becoming more relevant to explore soil biological processes in terms of their contribution to soil fertility. This book presents a

The pain of infertility is heartbreaking, frightening, and a real test of faith. In this ground-breaking volume, couples can access the information, Torah outlook, and answers they need in a clear, practical manner. Questions raised include: How do we know if there is a problem? How can the Torah be a source of support? What can we expect at the fertility clinic? Where are the side effects of fertility medication? Can one live a fulfilling life without children? This book takes couples down the obstacle-strewn path

Read Free The Key To Fertility Is The Egg Find Out How The Scientific Knowledge Of Egg Quality Can Help You Cure Infertility Conceive Naturally Optimize Your Success At Ivf And Overcome

toward fertility, discussing all factors that encompass difficulty conceiving. Topics discussed include: male fertility testing, IVF, adoption, niddah issues, faith, prayer, dealing with society, when to stop, choosing the right aregiver, producedures on Shabbos, being positive, and much more. This step-by-step, comprehensive guide is an indispensable tool for couples seeking fertility, but it will also be of great interest and benefit to relatives and friends of childless couples, as well as rabbis, therapists, and social workers.

Soil Biological Fertility

The Fertility Sourcebook

How Minority Status Affects Fertility

Low fertility in Europe has given rise to the notion of a ‘fertility crisis’. This book shifts the attention from fertility decline to why people do have children, asking what children mean to them. It investigates what role children play in how young adults plan their lives, and why and how young adults make the choices they do. The book aims to expand our comprehension of the complex structures and cultures that influence reproductive choice, and explores three key aspects of fertility choices: the processes towards having (or not having) children, and how they are underpinned by negotiations and ambivalences how family policies, labour markets and personal relations interact in young adults’ fertility choices social differentiation in fertility choice: how fertility rationales and reasoning may differ among women and men, and across social classes Based on empirical studies from six nations – France, Scandinavia, Denmark, Norway, Sweden, Germany and Italy (representing the high and low end of European variation in fertility

Read Free The Key To Fertility Is The Egg Find Out How The Scientific Knowledge Of Egg Quality Can Help You Cure Infertility Conceive Naturally Optimize Your Success At Jvf And Overcome Pregnancy Loss

rates) – the book shows how different economic, political and cultural contexts interact in young adults' fertility rationales. It will be of interest to students and scholars of sociology, anthropology, demography and gender studies.

Soil Fertility Management for Sustainable Agriculture

The implementation of family planning programs has been the principal population policy instrument in the developing world over the past few decades. This paper reviews that controversy over the role these programs have played in reducing fertility. Opposing views on a number of contentious issues (for example, the significance of unmet need and unwanted fertility) are summarized and a consensus position is presented. Surprisingly, recent estimates of the fertility reductions achievable through the implementation of strong family planning programs differ only modestly--from 1 to 1.4 births per woman. Since only a small proportion of countries have implemented strong programs, the (unweighted) average impact of programs in 1985-90 is estimated at only 0.33 births per woman. However, the (weighted) average, which gives the program impact for the developing world as a whole, is estimated at 0.96 births per woman in the late 1980s. This suggests that programs have been responsible for about 43% of the fertility decline in the developing world between 1960-65 and 1985-90.

The Role of Diffusion Processes in Fertility Change in Developing Countries

Freezing Fertility

The 14 articles in this collection provide new perspectives on American fertility in two ways; they portray substantial (and

Read Free The Key To Fertility Is The Egg Find Out How The Scientific Knowledge Of Egg Quality Can Help You Cure Infertility Conceive Naturally Optimize Your Success At IVF And Overcome Embryo Loss

unappreciated) changes in fertility behavior in the United States during the past two decades; and they identify and illustrate new frameworks and theoretical approaches for interpreting these changes. Despite the weakening of the traditional linkages between marriage, sexual activity, childbearing, and mothers staying at home to rear children, childbearing and childrearing retain their place as core family-related behaviors, both in social science theory and in widely shared perceptions of family life. They also remain vitally important for a range of domestic policy issues - social security, education, and poverty foremost among them.

Anthropological Studies of Human Fertility

Fertility in Men and Women

While many worry about population overload, this book highlights the dramatic fall in fertility rates globally exploring questions such as why are parents having fewer babies? Will this lead to population decline? What will be the impact of a world with fewer children and can social policy reverse fertility decline?
