Bare-Handed Survival Shelters

Ê If my present reader happens to be a Boy Scout or a scout-master who wants the scouts to build a tower for exhibition purposes, he can do so by following the directions here given, but if there is real necessity for haste in the erection of this tower, of course we cannot build one as tall as we might where we have more time. With a small tower all the joints may be quickly lashed together with strong, heavy twine, rope, or even wire; and in the wilderness it will probably be necessary to bind the joints with pliable roots, or cordage made of

bark or withes; but as this is not a book on woodcraft we will suppose that the reader has secured the proper material for fastening the joints of the frame of this signal-tower and he must now shoulder his axe and go to the woods in order to secure the necessary timber. First let him cut eight straight polesÑthat is, as straight as he can find them. These poles should be about four and one half inches in diameter at their base and sixteen and one half feet long. After all the branches are trimmed off the poles, cut four more sticks each nine feet long and two and a half or three inches in diameter at the base; when these are trimmed into shape one will need twenty six or seven more stout sticks each four and one half feet long for braces and for flooring for the platform.

Survive Survival situations often don't start off as such; like a day hike or a fishing trip. It is only when things go wrong that you are suddenly faced with life and death survival situation. Therefore, you want to plan for the unexpected. Before you set off into the woods, take the time to go through all contingencies. Disasters often don't come with advance notice, nor does it send you any early warning signs. So learning how to survive in the wilderness can truly save you and your family's life. After started hiking, backpacking and camping out for many years in 17 different countries, I have mastered the art of survival in the woods.

Because I have done it for so long, and I will tell you, it was a 'learn as I go' process for me. But for you, it may not be that easy. Why may you ask? What if there is a severe natural or man-made disaster happens suddenly, what if a war breaks out? Would you be ready? I have been teaching hiking, camping, and backpacking for many years throughout many countries, but only within the last three years, a group of people in Columbia asked me to teach them survival tactics in the woods.

That question opened my mind and eyes wide open; I knew why they had asked me to teach them, but what if similar civil and or political unrest or war breaks out in our country, how many of us would be ready? More importantly how many of us would actually survive? I believe every one of us needs to know at least the basics of wilderness survival like what bushcraft skills you need, what bushcraft gears and supplies you will require along with how to navigate yourself in the wilderness. This way if you ever need it, you will have the knowledge. Along with the knowledge, let's make a survival pack ready just in case. In that pack, we can put a few necessary gears, and few "must have."s.

The Complete Survival Shelters Handbook

Native Americans and aboriginal people everywhere survived, and often thrived, because of their wealth of common sense and backbone. Being a Neolithic man in North America or elsewhere could be a hard-scrabble proposition, with no room for the weak and scant tolerance for doing things that did not work. Generation after generation was taught how to do things the old way, because the old way was proven to work with the

resources they had. Shelters built with the tried-and-true techniques and materials of Native Americans--and even those who came before them on this continent--still work. In *Bare-Handed Survival Shelters*, author Fred Demara, author of *Eating on the Run* and *Survival Guide to Edible Insects*, teaches what has been proven to work for improvised shelters, because learning by trial and error is too costly in a survival scenario. Building emergency shelters starts with knowing what can be done and then learning the expedient way to do it. Odds are in your favor that these largely forgotten techniques will get you through, even if you start bare-handed, regardless of whether you need to survive a few hours, overnight, or for an extended period. Demara shows you how to make tools from whatever is available, select the proper site for your shelter, and match the type of shelter you need to the terrain, climate, and native materials. The simplicity of these ancient construction methods illustrates the most essential survival lesson of all: the importance of knowing you can do it, deciding that you will do it, and then getting on with it. Seek Shelter. These two words resonate with many and, in some ways, have become the basis of why we do what we do. Though much of our preparedness plans seek to shelter us in a less literal way the basis of the phrase still holds true. We shelter ourselves from starvation and dehydration with food storage and water catchment. We shelter ourselves from violence with things like guns and martial arts. We shelter ourselves from ignorance by consuming truthful and forward thinking news. What about truly sheltering ourselves inside an underground shelter for survival? For those who live in tornado alley an underground shelter is a necessity. If you have an F5 tornado bearing down on you its imperative that you have a place underground to stay safe. Otherwise you will be beat to death by debris or crushed under the falling structure. Let's consider today's volatile world for a moment. What place does an underground shelter have in your own personal preps?
